

# Crane Hook-2 VT 20

## Item no. 113712

Translation of the Original Instructions for Use

## Overview

- (1) Crane Hook-2 VT 20
- (2) Suspension Link
- (3) Type Plate

- (4) Bolt ISO 4014  
M20x80-8.8-VZ
- (5) Nut ISO 7042  
M20-8-VZ

Safety glasses

## Dimension specifications

Dimensions are usually given in mm. Other units of measure, e.g. cm, are shown in the illustrations. Load details are usually given in kg. Other measurement units, e.g. t, are shown in the illustrations.

## Conventions

- Instructions are numbered with:  
1. .... , 2. .... , 3. ....
- The result of an instruction is shown by: →
- Position numbers are clearly provided for the individual components and are given in the drawing, e.g. **1**, in the text in brackets, for example (1).
- Multiple position numbers, i.e. alternative components, are represented with a slash, e.g. **1 / 2**.

## Arrows

→ Arrow representing an action

## Safety instructions

The safety instructions alert site personnel to the risks involved and provide information on how to avoid these risks.

Safety instructions are featured at the beginning of the section ahead of the instructions, and are highlighted as follows:

### **Danger**

This sign indicates a hazardous situation which, if not avoided, will result in death or serious injury.

### **Warning**

This sign indicates a hazardous situation which, if not avoided, could result in death or serious injury.

### **Caution**

This Sign indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

This sign warns of situations whereby failure to observe the information can result in material damage.

## Safety instructions

### General

When using PERI lifting accessories, the Instructions for Use and markings are to be complied with at all times!

Deviations from the standard configuration are only permitted after a further risk assessment has been carried out by the contractor.

On the basis of this risk assessment, appropriate measures for working and operational safety as well as stability are determined.

For the application and inspection of our products, the current safety regulations and guidelines in the respective countries where they are being used must be observed at all times.

The contractor must ensure that the Instructions for Use provided by PERI are available at all times for the users and that they are fully understood!

The contractor can only assign those persons to independently use lifting accessories who are actually familiar with the task!

PERI lifting accessories are to be used in such a way that persons are never put at risk in any way!

The maximum bearing capacity of PERI lifting accessories must not be exceeded! All persons using the lifting accessories must check the equipment during use for obvious defects (e.g. deformations, cracks, breaks, incomplete markings)!

Do not use damaged lifting accessories!

PERI lifting accessories may not be used in the case of illegible or missing markings!

The contractor must ensure that the personal protective equipment required for the assembly, modification or dismantling of the system is available and used as intended.

For a better understanding, detailed illustrations are partly incomplete. The safety installations which have possibly not been featured in these detailed drawings must nevertheless be available!

## Safety instructions

### Product-specific

The person who attaches the load to the lifting accessory must be sufficiently secured against falling. In all cases, the load must be secured against tipping over and sliding!

Move loads only during safe wind conditions. Observe storm warnings! Depending on the type of load and the surface area subjected to the wind, the decision whether sufficient safety measures are in place when moving the load is taken on the jobsite.

The slings which are attached to the lifting accessories must be equipped with a hook securing device.

The operator may begin to move the load only if he is completely satisfied that the load has been correctly attached.

Ensure loads are evenly balanced when being picked up! Loads must be sufficiently stable both in their form and position so that the load does not move during transportation!

Ensure that the load is in a safe and secure position before releasing the slings! Always lift up or set down loads smoothly without any jerking!

Before moving, remove or secure any loose components!

Persons are not allowed to linger under the load being lifted!

Transporting persons on the load is prohibited!

Ensure that the slings, such as steel wire ropes and chains, are not knotted or twisted! Do not wrap the lifting chains of the lifting accessory around the load to be transported nor stretch over sharp edges! Twisted chains must be straightened!

## Intended use

PERI products have been designed for exclusive use in the industrial and commercial sectors by suitably trained personnel only!

The product described here is classified as lifting accessory which is used as a lifting point for accommodating tensile forces. It is used exclusively for moving individual panels or panel units of all formwork systems with PERI Formwork Girder VT 20.

The Crane Hook VT 20 is not used in continuous operations and, after being mounted, is an integral part of the load.

The Crane Hook-2 VT 20 may only remain attached to the designated position on the panel.

The lifting accessory is not approved for transporting personnel.

These Instructions for Use contain information for ensuring proper handling and correct application, inspection and maintenance.

The product described here corresponds to the relevant provisions and regulations of EU Machinery Directive 2006/42/EC.

These Instructions for Use provide the basis for the risk assessment. The risk assessment shall be compiled by the contractor. The Instructions for Use do not replace the risk assessment!

Use of the lifting accessory:

- Within the permissible load-bearing capacity of up to 1.3 t (1300 kg).
- Within the permissible temperature limits of  $-20^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$ .
- In good working order.
- When correctly assembled.

## Instructions on use

The use in a way not intended or deviating from the intended use according to the Instructions for Use represents a misapplication with a potential safety risk.

Changes to PERI components are not permitted.

Only PERI original components may be used. The use of other products and spare parts represents a misapplication with associated safety risks.

Do not use damaged lifting accessories.

## Target groups

### Contractor

These Instructions for Use are intended for contractors who

- assemble, modify and dismantle the PERI products, or
- use them , e.g. for concreting, or
- who have them used, e.g. for forming operations.

### Construction site coordinator

The Safety and Health Protection Coordinator\*

- is appointed by the client,
- must identify potential hazards during the planning phase,
- determines measures that provide protection against risks,
- creates a safety and health protection plan,
- coordinates the protective measures for the contractor and site personnel so that they do not endanger each other,
- monitors and ensures compliance with the protective measures.

### Qualified persons

Due to the specialist knowledge gained from professional training, work experience and recent professional activity, the qualified person has a reliable understanding of safety-related issues and can correctly carry out tests. Depending on the complexity of the test to be undertaken, e.g. scope of testing, type of testing or the use of a certain measuring device, a range of specialist knowledge is necessary.

\* Valid in Germany: Regulations for Occupational Health and Safety on Construction Sites 30 (RAB 30).

## Qualified specialists

PERI products may only be assembled, modified or dismantled by personnel who are suitably qualified to do so. For the work to be carried out, the qualified personnel must have received instructions\*\* which contain at least the following points:

- An explanation of the plan for the assembly, modification or dismantling of PERI products in an understandable form and in the language of the user.
- Description of measures in order to safely assemble, modify or dismantle the PERI products.
- Designation of the preventive measures to avoid the risk of persons and objects falling.
- Designation of the safety precautions in the event of changing weather conditions which could adversely affect the safety of the PERI products concerned as well as the personnel.
- Details regarding the permissible loads.
- Description of any other risks that are associated with the assembly, modification or dismantling procedures.

**In other countries, ensure that the relevant national guidelines and regulations in the respective current version are complied with!**

\*\* Instructions are given by the contractor himself or a qualified person selected by him.

## Storage and transportation

Store and transport the lifting accessory so that it cannot unintentionally change its position or be damaged in any way.

Do not drop the lifting accessory.

During the moving procedure with the crane, ensure that components are picked up and set down so that any unintentional falling over, falling apart, sliding, falling to the ground or rolling is avoided.

Do not place any loads on the lifting accessory.

Use original PERI storage and transport systems, e.g. crate pallets.

Store in a dry, clean and corrosion-protected condition at temperatures from  $-20^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$ .

PERI lifting accessories must be protected against the effects of the weather and aggressive materials if safety is then likely to be affected!

During transport, intermediate storage or when remaining suspended on the load, ensure that they remain free of dirt and that their functionality is not affected.

## Additional technical documentation

- Instructions for Use:
  - Pallets and Stacking Devices
- Brochures
  - VT 20 Formwork Girder

## Care and maintenance instructions

The lifting accessory has been designed for long-term use on construction sites.

In order to ensure a cost-effective, technically sound and safe use over a long period, it is important to take a value-preserving approach.

Repairs are to be carried out by authorized PERI personnel only. Only PERI original components may be used.

## Identification markings

### Danger

**Do not use the Crane Hook-2 VT 20 if the type plate is missing or illegible!**

### Type Plate (Fig. 1)

Markings comply with the requirements of the EU Machine Directive 2006/42/EC.

Fig. 1

## Inspections

### 1. General

The procedure described in this section is based on the current German regulations for testing and inspections. The points listed form the minimum requirements for the inspection.

The respective regulations of the individual states and countries where this product is used must be taken into account.

If no country-specific regulations are available, it is recommended to proceed according to German rules and regulations.

The contractor is responsible for determining the type, scope and intervals for the required tests relating to the provision of the lifting accessory. As a result of these inspections, any safety-related defects are to be systematically identified and remedied.

## 2. Purpose

Due to the check carried out before the initial operations as well as regularly recurring inspections of the lifting accessory, it can be ensured that operational and functional reliability is guaranteed.

## 3. Responsibility

The contractor must ensure that the lifting accessory is put into operation only if it has been inspected by a qualified person.

## 4. Inspection

It has to be verified whether all defects have been rectified or non-functioning products have been replaced.

The inspection includes a visual and functional check:

### 4.1 Safety check

- Deformation, wear and lengthening of the components.
- Corrosion damage.
- Mechanical damage.
- Check bolts, lifting beam hooks and chain slings for signs of damage.
- Availability of all components.
- Cracks, bending, flattening, notches on components.
- Only original PERI components may be used.
- Indications of impermissible heating or contact with fire.
- Markings must be legible.

### 4.3 Functional check

- Free and easy movement of moving parts.
- Locking system works correctly.
- Safety pawls and safety hooks engage.
- Eyes and shackles for fastening purposes are usable.

Implementation of anything beyond the usual scope of inspection is subject to the discretion of the competent person and can extend to additional checks.

### 4.4 Measures

If any defects are determined during the safety inspection, they must be eliminated according to the instructions provided by the authorised person. A new inspection is to be subsequently carried out.

### 4.5 Inspection before starting work operations

- Check whether the load-bearing capacity of the load-carrying equipment is sufficient for the weight of the load.
- Check the lifting accessory for any defects.

## Load-bearing capacity

### Warning

- Moving of other products is not permitted!
- Moving without the use of a Compression Brace is not permitted!

**Load Factor: 3**  
(according to DIN 13155)

### Perm. load-bearing capacity with cantilever length L:

$L \leq 0.75 \text{ m} = 1300 \text{ kg}$

$L \leq 1.0 \text{ m} = 1000 \text{ kg}$

**Max. crane sling angle: 30°**

Fig. 1

Fig. 2

## Assembly

### Danger

- Panel can tip over!
- Secure panel against tipping over!
- Assembly on a vertical panel is to be carried out from a safe position, e.g. working scaffold!
- Always attach two Crane Hooks-2 VT 20 symmetrically to the load centre of gravity! (Fig. 1)

### Procedure

1. Remove the bottom three bolts (4) and nuts (5) from the Crane Hook-2 VT 20, SW 30.
2. Push Crane Hook-2 VT 20 from above over the web of the VT 20 Formwork Girder. For horizontal assembly, push over the web from the front (not shown).
3. Align Crane Hook-2 VT 20 in the direction of the three holes.
4. Insert the three bolts through the web of the VT 20 Formwork Girder and the two lugs of the Crane Hook-2 VT 20. (Fig. 3)
5. Loosen the three nuts (5) by turning in a clockwise direction and secure with torque wrench (60 Nm). (Fig. 4)
6. Repeat steps one to five on the opposite side and attach the Compression Brace (6). (Fig. 2)

Fig. 3

Fig. 4

The length of the Compression Brace is dependent on the width of the panel. It is secured with wire pins or bolts on the VT 20 Formwork Girder.

## Transport of load

### Before lifting:

- Check the attachment of the Crane Hook-2 on the panel. (Fig. 5)
- Check if the Compression Brace (6) is securely positioned. (Fig. 6)

Fig. 5

### During transportation:

#### Danger

**Never linger under suspended loads!**  
**Always guide loads by means of a rope!**

### After concreting:

#### Warning

**Do not release the panels from the concrete with the crane. Uncontrolled movement and overloading!**

### Setting down:

Never set the load down abruptly.  
Do not put the Crane Hook-2 VT 20 down onto obstacles.

Fig. 6

## Dismantling

### Danger

- Panel can tip over!
- Secure panel against tipping over!
- Assembly on a vertical panel is to be carried out from a safe position, e.g. working scaffold!

### Procedure

1. Remove Compression Brace (6).  
(Fig. 6)
2. Release the three nuts (5) by turning in an anti-clockwise direction and remove, SW 30. (Fig. 7)
3. Remove the three bolts (4).
4. Pull Crane Hook-2 VT 20 upwards.  
(Fig. 8)
5. Attach bolts with nuts to the Crane Hook.

### Horizontal dismantling

not shown

1. Position the panel on timbers.
2. Release crane lifting gear.
3. Remove Compression Brace.
4. Release the three nuts by turning in an anti-clockwise direction and remove, SW 30 (Fig. 7)
5. Remove the three bolts.
6. Pull the Crane Hook-2 VT 20 forwards.  
(Fig. 8)
7. Attach bolts with nuts to the Crane Hook.

Fig. 7

Fig. 8

## Disposal

Disposal of the components must be arranged by an authorized person.

### Caution

- **Separate materials correctly and according to type.**
- **The materials are to be disposed of according to local regulations and guidelines.**

Item no.	Weight kg	
113712	8.1	<b>Crane Hook-2 VT 20</b>

**Note**

Follow Instructions for Use.

**Technical data**

Permissible load-carrying capacity 1.3 t with a crane sling angle  $\leq 30^\circ$ .

## EG – Konformitätserklärung im Sinne der EG-Richtlinie 2006/42/EG Anhang II, 1.A

**In der Gemeinschaft ansässige Person, die bevollmächtigt ist, die technischen Unterlagen zusammenzustellen:**
