Dimension Specifications

Dimensions are usually given in mm. Other measurement units, e.g. cm, are shown in the drawings.

Conventions

- Instructions are numbered (1....., 2....., ...)
- The result of an instruction is shown by: →
- Multiple position numbers, i.e. alternative components, are represented with a slash: 1/2.e.

Arrows

- Arrow representing an action →
- Arrow representing a reaction of an action* ⇐
- Arrow representing forces →

* if not identical to the action arrow

Terms and Definitions

Standard

Preferred construction method.

Alternative

Alternative construction method as standard.

Variants

Equivalent construction methods but different versions.

Climbing anchor

A = Leading Anchor
B = Bracket Anchor
C = Following Anchor

General

The illustration on the front cover of these instructions is understood to be a system representation only. The assembly steps presented in these Instructions for Assembly and Use are shown in the form of examples with only one component size. They are accordingly valid for all component sizes contained in the standard configuration.

For a better understanding, detailed illustrations are partly incomplete. The safety installations which have possibly not been featured in these detailed drawings must nevertheless be available.

Combination Possibilities

Components Description	Size	Variant	Climbing Unit	
			SCS 190*	SCS 250
Crossbeam Unit		SCS 190	x	–
		SCS 250	–	x
Girder		VT 20	x	x
		GT 24	x	x
		Timber 80 x 160	x	x
Guardrails / Lateral Anti-Fall Protection Posts		Guardrail Post SCS 150**	x	x
		End Guardrail Post CB	x	x

*** according to static specifications

Anchoring in the wall

Climbing Anchors

There are two sizes

- M30 or
- M36

The size to be used depends on the load according to the static calculations.

Climbing Anchor M30

Pos.	Components	Item no.
15.1	Climbing Cone-2 M30/DW 20	030920
15.2	Tie Rod DW 20 or B 20*	030700
15.3	Threaded Anchor Plate DW 20*	030860

* non-reusable components

The load-bearing capacity is reduced when using Tie Rod B 20 with a continuous thread, see separate SCS dimensioning information.

Fig. 05

Climbing Anchor M36

Pos.	Components	Item no.
15.7	Climbing Cone-2 M36/DW 26	030940
15.8	Tie Rod DW 26*	030340
15.9	Threaded Anchor Plate DW 26*	030870

* non-reusable components

Fig. 06

Concreted anchor point

Fig. 07

H = height measurement

L_s = length of tie rod

h_{nom} = anchoring depth

c_2 = distance of anchor to concreting joint

$c_2 = 350$ mm

Standard distance to the concreting joint if not specified in the plan.

Spray the climbing cone with a release agent before installation.

→ Facilitates easier removal.

Check anchor point

All individual components

- Anchor type

Assembly

- Anchoring depth h_{nom}
- Screw-in depths

Concrete

- Sufficient concrete strength
- Cavity-free anchor base

Intended Use of the Standard Configuration

Product Description

PERI products have been designed for exclusive use in the industrial and commercial sectors only by suitably trained personnel.

The Single-Sided Climbing Formwork SCS is normally used as a load-bearing system in order to support single-sided, anchorless wall formwork in accordance with DIN EN 12812.

The load-bearing system of the climbing unit consists of two climbing brackets with accessories, platform beams with planking, strongbacks with formwork and spindles.

The climbing bracket consists of crossbeams along with vertical and diagonal struts. The Crossbeam contains either an Adjusting Unit (SCS 190) or an Adjusting Unit with Carriage (SCS 250). The brackets are connected to each other by scaffold tubes and the working platform. The forces arising from the dead load, live load, wind load and concrete pressure are transferred from the brackets via the climbing anchors and pressure point into the structure. Additional tension belts prevent the system from tipping when empty or in a forward-inclined position.

In the standard configuration, VARIO GT 24 girder wall formwork is connected to the platform unit and together this forms the climbing unit. The climbing unit is moved with the crane. The load-bearing point is above on the Strongback.

A finishing platform can be suspended on the brackets, and a concreting platform can be attached to the Strongback. Access via ladders with hatches are possible with PERI standard components. All-round side protection can be attached to all platforms.

Before concreting, the formwork is pressed against the previously concreted section by means of controlled pressure with the Adjusting Unit. Striking is carried out by turning the Heavy Duty Spindles and relieving the Adjusting Unit.

For the first casting segment, a Starter Brace Frame with the strongback, spindle and additional Starter Bars can be assembled in order to support the single-sided formwork. The Starter Brace Frame is anchored in the concrete base with diagonal anchors.

Technical Data

SCS 250:

Reach approx. 2.50 m.
Static height $H_0 = 2.58$ m or 2.40 m.
Depending on the formwork type, the formwork can be retracted approx. 63 cm in order to work in front of the formwork.

SCS 190:

Reach approx. 1.90 m.
Static height $h_0 = 2.58$ m or 2.40 m.
The formwork can be inclined by turning the Heavy Duty Spindle.

Instructions on Use

General

The use in a way not intended, deviating from the standard configuration or the intended use according to the Instructions for Assembly and Use, represents a misapplication with a potential safety risk, e.g. risk of falling.

Only PERI original components may be used. The use of other products and spare parts represents a misapplication with associated safety risks.

Changes to PERI components are not permitted.

Safety Instructions

General

These Instructions for Assembly and Use serve as basis for the project-related risk assessment and the instructions for the provision and use of the system by the contractor. However, they do not replace them.

The contractor must ensure that the Instructions for Assembly and Use provided by PERI are available at all times for the users, and must also ensure they are fully understood. Safety instructions and permissible loads must be observed at all times.

For the application and inspection of our products, the current safety regulations and guidelines must be observed in the respective countries where they are being used.

In order to guarantee the safety against falling, the contractor must carry out a site-specific risk assessment based on these Instructions for Assembly and Use and the included safety and warning information during each respective assembly, modification and dismantling procedure, as well as every time the system is used! Based on the risk assessment, appropriate measures regarding safety against falling are to be implemented on site!

The contractor must ensure that the required personal protective equipment needed for the assembly, modification or dismantling is available and used as intended.

Materials and working areas are to be inspected on a regular basis especially before each use and assembly, and checked for signs of damage as well as stability and functionality. Damaged components must be exchanged immediately on site and may no longer be used.

The contractor has to provide safe working areas for site personnel which are to be reached through the provision of safe access ways. Areas of risk must be cordoned off and clearly marked.

Safety components are removed only when they are no longer required.

The contractor must guarantee the stability during all stages of construction especially during assembly, modification and dismantling. He must ensure and prove that all loads can be safely transferred.

Deviations from the standard configuration may only be carried out after a separate risk assessment has been completed by the contractor. On this basis, appropriate measures for the working and operational safety as well as the stability are to be implemented. Appropriate proof of stability can be provided by PERI if the risk assessment and measures deriving from this are readily available.

Components provided by the contractor must conform with the characteristics required in these Instructions for Assembly and Use as well as all valid construction guidelines and standards. Unless otherwise indicated, this applies in particular to:

- Timber components: Strength Class C24 for Solid Wood according to EN 338.
- Scaffold tubes: galvanised steel tubes with minimum dimensions of Ø 48.3 x 3.2 mm according to EN 12811-1:2003 4.2.1.2.
- Scaffold tube couplings according to EN 74.

In the event of unfavourable weather conditions, e.g.

- poor visibility (fog),
- strong winds,
- snow,

suitable precautions and measures are to be taken in order to ensure both work and operational safety as well as stability.

In case of extraordinary events which could compromise the safety, e.g.

- storms,
- earthquakes,
- accidents,
- longer downtimes,

the system must be comprehensively checked by a qualified person on behalf of the contractor regarding the working and operational safety as well as the stability. The results of the inspection are to be documented.

Storage and Transportation

Store and transport components ensuring that no unintentional change in their position is possible. Detach lifting gear from the lowered components only if they are in a stable position and no unintentional change is possible.

Do not drop the components.

Use only suitable load-carrying equipment to move the components as well as the designated load-bearing points.

During the moving procedure, ensure that components are picked up and set down so that unintentional falling over, falling apart, sliding or rolling is avoided.

The access areas on the jobsite must be free of obstacles and tripping hazards as well as being slip-resistant.

For transportation, the surface must have sufficient load-bearing capacity.

Use original PERI storage and transport systems, e.g. crate pallets, pallets or stacking devices.

Safety Instructions

System-specific

The contractor must ensure that assembly, modifications and dismantling, moving as well as the use and handling of the product is managed and supervised by professionally qualified and authorized personnel.

All persons working with the product must be familiar with the operating instructions and safety information.

The contractor must ensure that the Instructions for Assembly and Use, other instructions required for operations or assembly, relevant planning documents, parts lists and other data are available to users.

Retract components only when the concrete has sufficiently hardened and the person in charge has given the go-ahead for striking to take place.

Anchoring is to take place only if the anchorage has sufficient concrete strength.

Close hatch cover immediately after climbing through the hatch.

Assembly work

The contractor must ensure that the user has the appropriate and sufficient number of tools, lifting equipment and slings, suitable and sufficient space for assembly and storage as well as adequate crane capacity at his disposal.

There is always the possibility that unforeseen risks arise during assembly work. Assess the degree of risk in each individual case and, if necessary, take measures to prevent or at least minimize the risk.

If anti-fall protection cannot be used or has to be removed due to operational reasons, safety equipment must be installed in its place in order to prevent or arrest falls from any height. If the use of fall arrest equipment is deemed to be inappropriate, personal protection equipment (PPE) can be used if suitable fixing points are available.

Use a guide rope to ensure that assembly units suspended from the crane are fully under control when being moved.

Do not remain under any suspended loads. If work under suspended loads cannot be avoided, determine and apply all appropriate measures. Avoid entering the area between suspended loads and the building. Site personnel are forbidden to remain in areas below where assembly work is being carried out unless the area of risk has been provided with sufficient protection against falling, overturned, sliding or rolling objects and masses. Cordon off areas of risk.

Maintenance and repairs

The components of the climbing formwork are to be inspected before each use to ensure that they are in perfect condition and function correctly. Basically, only materials in perfect condition are to be used.

The platforms are to be inspected for signs of damage by authorised personnel at regular intervals. Remove loose concrete residue. Dirt which affects the functionality is to be removed immediately. Damaged components are to be inspected, removed and replaced accordingly.

In case of overload or damage, stop work on and under the platforms, determine the cause, set down and replace damaged components.

If the maximum permissible wind speed has been exceeded, temperatures are outside the scope of application or after any extraordinary event has taken place such as a fire or earthquake, the functionality and load-bearing capacity of all safety components as well as the supporting structure are to be checked.

Safety components:

- Regular visual inspections are to be carried out by qualified personnel.
- Before any climbing or assembly, a functionality check is to be carried out by qualified personnel.
- Only PERI original components are to be used when replacing parts.
- Repairs are to be carried out by PERI qualified personnel only.

Supporting structure:

- A visual inspection is to be carried out by authorised personnel before the initial use.
- Only PERI original components are to be used for repairs or replacement.

Other components:

- Inform authorised persons.
- Repairs are carried out by authorised personnel.

Access

Safe access to all working areas must be guaranteed at all times.

Preferred options are walkways, stairs, stair towers or passenger lifts. Ladders are suitable for use as access ways in exceptional cases only.

Ladders must not be connected to each other for more than two levels and should be offset against one another. They must be secured on the outer side by means of appropriate anti-fall equipment such as rear safety protection or safety nets.

Suitable equipment must be available on hatches and openings on accessible areas in order to prevent accidents. After the ladder access is used each time, ensure that the hatch cover is closed.

In the case of danger, it must be ensured that working areas can be vacated via emergency escape routes or rescue equipment. It must also be ensured that at least one emergency escape route or piece of rescue equipment can still be used if the power supply fails.

Protection against falling components

Work activities may not be carried out simultaneously on areas positioned on top of each other unless the lower working areas and access routes are provided with protection against falling objects such as tools or materials.

Avoid positioning working areas and access points in areas of risk. If this is not possible due to work procedures, suitable protection equipment must be available. This also applies to work requiring only a short period of time.

Operational working areas at great heights are to be secured against falling objects by means of appropriate constructional measures. Safety nets (mesh size ≤ 2 cm) and planking are considered to be suitable means and are to be installed very close to the structure (distance ≤ 5 cm).

Working areas positioned below must be protected using suitable protective roofs along the entire area at risk.

Secure all pins with cotter pins and all bolts with nuts.

Climbing Procedure

Retract components only when the concrete has sufficiently hardened and the person in charge has given the go-ahead for striking to take place. Suspend climbing units on the next concreting section only after the required concrete strength has been reached.

As a result of the moving procedure, falling edges are formed between the platforms. These areas are to be cordoned off!

Do not transport persons, building materials or tools when moving with the crane. Exceptions to this can be determined through the operational working and assembly instructions on the basis of a corresponding risk assessment.

In case of a malfunction, lower the platform to the next possible position, personnel are to leave the climbing unit in a safe and secure manner and an authorized person is to be notified immediately!

Care and Maintenance Instructions

Formwork

Regular cleaning and care is necessary in order to maintain the value and usability of the formwork materials over the long-term. Additionally, some repair work may also be inevitable due to the tough working conditions. The following points should help to keep care and maintenance costs as low as possible.

The elements (used or new) should be sprayed all over with the PERI Bio Clean concrete release agent before every use. This makes it easier and quicker to clean the formwork. The concrete release agent should always be sprayed on thinly and evenly!

Spray rear side of the formlining with water immediately after concreting. This saves on time-consuming cleaning operations.

The formlining of the panels must be sprayed with the release agent immediately after striking if in continuous use. Only then cleaning can take place with a scraper, brush or rubber lip scraper. Important: do not clean plywood formlining with a high-pressure cleaner as this can lead to damage. During cleaning, always ensure that the panels are in a secure position! Do not clean the elements when suspended from the crane!

Box outs and built-in parts should be fixed with double-headed nails. This makes it easier to remove the nails later on and to a large extent prevents damage to the formlining.

Any unnecessary anchor holes should be sealed with plugs. As a result, this eliminates subsequent cleaning or repair work. Anchor holes accidentally blocked with concrete are freed by means of a steel pin from the formlining side.

When putting down bundles of reinforcement bars or other heavy objects on horizontally stored formwork elements, suitable support items, e.g. square timbers, are to be used. This prevents indentations and damage being caused to the formlining.

If possible, concrete internal vibrators are to be used with rubber caps. This reduces the risk of damage to the formlining if accidentally "inserting" the internal vibrator between the reinforcement and formlining.

The panels should not be treated with concrete release agent immediately before transport due to safety reasons.

Steel brushes or hard metal scrapers must not be used for cleaning powder-coated elements or accessories. Such cleaning processes will destroy the high-quality powder coating.

Use spacers for reinforcement with large-area support or flat supports. This prevents indentations being created in the formlining by the load.

Moving components, such as spindles or gears, are to be cleaned before and after use in order to remove dirt or concrete residue, sprayed with a release agent and, if necessary, lubricated with acid-free grease.

For longer storage periods, e.g. bad weather, store components in a clean condition and sprayed. Repair damage to the paintwork with rust protection paint.

Additional technical documentation

- Instructions for Assembly and Use for VARIO GT 24 Girder Wall Formwork
- Instructions for Assembly and Use for TRIO Panel Formwork

*The short form "SCS Dimensioning Information" is used in the sections that follow.

Operating states

Operational status

- Cleaning of formwork, wall reinforcement, closing and striking of formwork, anchor installation and dismantling, inspection and maintenance.
- Platforms are freely accessible for the work to be carried out.
- Loads are evenly distributed. Single-sided loads on cantilevered platform areas are only allowed if an appropriate fixation against lift-off is fitted to the bracket positioned opposite.

Climbing status

During the climbing procedure, site personnel are not allowed to remain on the platform.

- Moving the climbing unit with the crane.
- Formwork is retracted or inclined to the rear.
- Non-intended loads on the platform must be removed.

When concreted

- Concreting the casting segment.
- Concreting platform is freely accessible for the work to be carried out.
Working platform: only access - no additional loads. Finishing platform: no access.

Non-operational

- During longer work breaks or storm warnings with wind speeds over 102 km/h.
- Bring formwork in concreting position.
- Accessing the platform during storm conditions is forbidden.
- If appropriately secured, materials or equipment can remain on the platform.
- Max. resulting wind speed (wind flow pressure) for storms depends on the utilisation height, wind zone and terrain category in accordance with DIN 1055 or EC 1.
- For storm warnings with higher wind speeds than assumed, an authorized person is to be informed and, if necessary, all enclosure netting and tarpaulin removed. The climbing unit can be climbed back to the previous concreting section if instructed to do so. Remove materials and equipment from the platforms.

Permissible loads

Component / Requirement	Operational status	When concreted	Non-operational
Concreting platform	150 kg/m ²	150 kg/m ²	–
Working platform	300 kg/m ²	75 kg/m ²	75 kg/m ²
Finishing platform	150 kg/m ²	–	–
Max. wind speed	102 km/h	72 km/h	According to specifications
Max. wind flow pressure	0,50 kN/m ²	0,25 kN/m ²	According to specifications
Concrete pressure [kN/m ²]	–	According to specifications	–
Position of the formwork	Retracted or in concreting position	In concreting position	In concreting position

The stability for the loads and conditions must be checked by means of a static calculation in accordance with separate SCS dimensioning information!

Preparation

1. Assemble wall formwork.
2. Mount working platform including hatch and brackets if necessary, see A1.1 + A1.2 + A1.3.
3. Assemble finishing platform, see A1.4.
4. Mount concreting platform, see A1.5.

Starter Brace Frame

1. Install anchoring for the Starter Brace Frame, see A2.1.
 2. Assemble Starter Brace Frame with wall formwork for the first casting segment, see A2.2.
 3. Fix Leading Anchor, see A2.6.
 4. Carry out reinforcement work.
 5. Concrete the first section.
- (Fig. 08)

Preparation for initial use

1. Release Leading Anchor, see A2.7.
 2. Strike the formwork,
 - SCS 190 see A4.4.
 - SCS 250 see A4.5.
 3. Install Mounting Ring or Mounting Bolt, see A2.8.
- (without illustration)

Initial use

1. Suspend working platform unit, see A2.3.
 2. Insert locking pins, see A5.2.
→ secured position.
 3. If necessary: fix Tension Belt, see A2.5.
 4. If necessary: clean and align formwork, see A4.
 5. Fix Strongback on the formwork, see A3.1.
 6. If required, install Compression Brace, see A3.2.
 7. Fix concreting platform to the Strongbacks, see A3.3.
 8. Connect formwork to the platform unit, see A3.4.
 9. Carry out reinforcement work.
 10. Fix Leading Anchor, see A2.6.
 11. Close and align formwork, see A4.
 12. Concrete second section.
- (Fig. 09)

Striking

1. Release fixation of the Leading Anchor, see A2.7.
 2. Strike formwork,
 - SCS 190 see A4.4.
 - SCS 250 see A4.5.
 3. Install Mounting Ring or Mounting Bolt, see A2.8.
 4. Availability of mounted finishing platform, see A1.4.
- (Fig. 10)

Fig. 08

Fig. 09

Fig. 10

Moving

- **Persons are not to be transported!**
- **No loose components or other loads are to be transported!**
- **Persons are to keep away from the area of risk!**

1. Release Tension Belt on the Following Anchor, see A2.5.
 2. Connect the finishing platform, see A2.4.
 3. If necessary: mount lateral anti-fall protection, see A1.6.
 4. Move climbing unit to the next section, see A5.
 5. If necessary: mount access ladder to the finishing platform, see A2.10.
- (Fig. 11)

Fig. 11

Standard cycle

1. If necessary: fix Tension Belt to the Following Anchor, see A2.5.
2. If necessary: clean* formwork and align, see A4.
3. Carry out reinforcement work.
4. Fix Leading Anchor, see A2.6.
5. Close and align formwork, see A4. (Fig. 12)

* if formwork is worn, replace formwork, see A3.5.

Fig. 12

6. Concrete standard section.
 7. Release fixation of the Leading Anchor, see A2.7.
 8. Strike the formwork, -SCS 190 see A4.4. -SCS 250 see A4.5.
 9. Install Mounting Ring or Mounting Bolt, see A2.8.
 10. Release Tension Belt on the Following Anchor, see A2.5.
 11. Close anchor hole, see A2.9.
 12. Move climbing unit to the next section, see A5.1.
 13. Insert locking pins, see A5.2. → secured position
- (Fig. 13)

Dismantling

Dismantling the climbing formwork, see A6.

Fig. 13

A1.1 Mounting the working platform

- Provide and prepare an appropriate area for the assembly.
- Minimum width:
standard planks = 240 mm.
Cut planking ≥ 100 mm (compensation).
- The bracket spacing **c** and cantilevers **d₁** and **d₂** as well as the complete length **L** are provided in the planning details.

There are three girder options:

- VT 20 - standard girder
- GT 24 - alternative girder.
- Timber 80 x 160 mm - alternative girder.

Alternative platform assembly

As an option, the Crossbeam Units are retrofitted, see page 17.
(Fig. A1.07 + A1.08)

Pos.	Components per platform	Qty	Item no.
13.4	Planking 40 x 240 mm	–	–
	TSS-Torx 6 x 80 (per plank)	4	024690

Working Platform SCS 190

Assembly with VT 20

Fig. A1.01

Working Platform SCS 250

Assembly with VT 20

Fig. A1.02

Platform assembly with VT 20

Preparation

Cut planking (13.4) to the required length.

SCS 190: 1911 mm. (Fig. A1.01)

SCS 250: 2511 mm. (Fig. A1.02)

Assembly

1. Position Crossbeam (1/2) on the support timber (13.8) and align. (Fig. A1.01 or A1.02)
2. Place VT 20 (13.1) in the support of the Crossbeam and align components at right angles to each other. (Fig. A1.01 or A1.02 + Fig. A1.03a)
3. Fix VT 20 to the Crossbeam:
 - Pre-drill ($\varnothing 6$) every VT 20, laterally spaced at distance c and below with 25 and 180 mm spacings.
 - Fix VT 20 to the Crossbeam using 2 x wood screws 8 x 60 in each case. (Fig. A1.01 or A1.02 + Fig. A1.03a)
4. Place planking at right angles to the girder starting with the planks next to the crossbeam - width may have to be cut to required size.

Girder VT 20

Fig. A1.03a

Fig. A1.03b

5. Fix each plank with 4 Torx 6 x 80 (2x per crossing with VT 20) to the VT 20. (Fig. A1.03b)
6. Place Toe Board (13.5) on the planking.
7. Fix Toe Board to the Crossbeam:
 - Pre-drill ($\varnothing 8$ mm) Toe Board.
 - Fix Toe Board with F.H. Bolt M8 x 45 MU to Crossbeam. (Fig. A1.03b)
 - Fix Toe Board to cantilevers and between the Crossbeams with Angle Connectors 90°, and Torx 6 x 40 to the platform.
 - Bracing.

8. Close gaps in the decking below the Crossbeam with 4 mm thick formlining strips (13.7) or boards. Leave open gaps for anchor positions and diagonal struts.
→ No material or dirt falls through the gaps in the decking.

Note: cut planking width ≥ 100 mm! (Fig. A1.01 or A1.02)

Platform assembly with GT 24

Preparation

Cut planking (13.4) to the required length.

SCS 190: 1911 mm. (Fig. A1.01)

SCS 250: 2511 mm. (Fig. A1.02)

Assembly

1. Position Crossbeams (1/2) on support timbers (13.8) and align. (Fig. A1.04b)
2. Place GT 24 (13.1) in the Crossbeam support (1/2) and align components at right angles to each other. (Fig. A1.04b)
3. Fix GT 24 to Crossbeam:
 - Pre-drill ($\varnothing 6$) every GT 24, laterally spaced at distance c and below with 25 and 180 mm spacings.
 - Fix GT 24 to the Crossbeam using 2 x wood screws 8 x 60 in each case. (Fig. A1.01 or A1.02 + Fig. A1.04a)

Girder GT 24

Fig. A1.04a

Fig. A1.04b

4. From Point 4 onwards identical with VT 20, see above. In addition: remove planking on the toe board fixation 40 x 50 mm. (Fig. A1.04c)

Fig. A1.04c

Platform assembly with timbers 80 x 160

Preparation

Cut planking (13.4) to required length.

SCS 190: 1911 mm. (Abb. A1.01)

SCS 250: 2511 mm. (Abb. A1.02)

Note: cut planking width ≥ 100 mm!
(Fig. A1.01 or A1.02)

Assembly

1. Position crossbeam (1/2) on support timber (13.8) and align.
(Fig. A1.01 or A1.02)
2. Place timber 80 x 160 mm (13.1) in the support of the crossbeam and align components at right angles to each other. (Fig. A1.01 or A1.02)
3. Fix timber to crossbeam. There are two options:
 - **Standard:**
Pre-drill timber ($\varnothing 8$).
Fix pre-drilled timber to Crossbeam Unit using **2x F.H. Bolt M8 x 100 with Nut M8 and Washer A8** in each case. (Fig. A1.05a)
 - **Alternative:**
Pre-drill timber with $\varnothing 16$.
Fix pre-drilled timber to Crossbeam Unit using **1x Bolt M16 x 100 with Nut M16 and Washer A16** in each case. (Fig. A1.06a)
4. Place planking at right angles on the timber starting with the planks next to the crossbeam - width may have to be cut to required size.
5. Fix each plank with 4x Torx 6 x 80 (2x when crossing the timber) to the timber. (Fig. A1.03b)
6. Place Toe Board (13.5) on the planking.
7. Fix Toe Board to the crossbeam.
 - Pre-drill ($\varnothing 6$) Toe Board.
 - Fix Toe Board to the crossbeam using F.H. Bolt M8 x 45 MU. (Fig. A1.03b)
 - Fix Toe Board to cantilevers and between the crossbeams with Angle Connectors 90°, and Torx 6 x 40 to the platform.
→ Bracing.
8. Close gaps in the decking below the crossbeam with 4 mm thick form-lining strips (13.7) or boards. Leave open gaps for anchor positions and diagonal struts.
→ No material or dirt falls through the gaps in the decking.

Standard: 2x F.H. Bolt DIN 603 M8 x 100 MU

Fig. A1.05a

Fig. A1.05b

Alternative: 1x Bolt ISO 4014 M16 x 100 MU

Fig. A1.06a

Fig. A1.06b

Subsequent mounting of the crossbeam.

Alternative platform assembly

- Optionally, the crossbeam can be subsequently mounted.
- The illustrations show the Girder VT 20.

Preparation

1. Pre-drill ($\varnothing 6$) every girder. For the different girders or timber, take into account the different dimensions:
 - VT 20: see Fig. A1.03a.
 - GT 24: see Fig. A1.04a.
 - 80 x 160 mm: see Fig. A1.05a.
2. Cut planking (13.4) to the required length.
 - SCS 190: 1911 mm. (Abb. A1.01)
 - SCS 250: 2511 mm. (Abb. A1.02)

SCS 190

Fig. A1.07

SCS 250

Fig. A1.08

Platform assembly

1. Position girders and timber (13.1) on the support timber (13.8) and align.
2. Fix planking with Torx 6 x 80 (2x when crossing) to the girders or timber.
3. Insert crossbeam (1/2).
 - SCS 190 (1) Fig. 1.07.
 - SCS 250 (2) Fig. 1.08.
4. Align girders or timber and crossbeam at right angles to each other.
5. Fix Toe Board (13.5) to the crossbeam and planking:
 - Pre-drill Toe Board with $\varnothing 8$ mm.
 - Fix Toe Board to the crossbeam using F.H. Bolt M8 x 45 MU.
 - Fix Toe Board to cantilevers and between the crossbeams with Angle Connectors 90°, and Torx 6 x 40 to the platform.
 - Bracing.
6. Fix girders or timber to each crossbeam using 2x Torx 8 x 60.
7. Close gaps in the decking below the crossbeam with 4 mm thick formlining strips (13.7) or boards. Leave open gaps for anchor positions and diagonal struts.
 - No material or dirt falls through the gaps in the decking.

Securing the planking

Necessary if d_1 or d_2 are larger than the half-distance of the bracket spacing ($c/2$), see Fig. A1.01 or A1.02.

In order to avoid any tilting of the planking lining on the cantilevers, wedge the spacing between the crossbeams and the decking with timber (13.9), and secure with nails. (Fig. A1.09)

Fig. A1.09

A1.2 Hatch installation

Pos.	Components per platform	Qty	Item no.
31	Hatch RCS 55 x 60-2, foldable alternative: Hatch 55 x 60, foldable - sliding hatch*	1	126431 110608 051430
32	Timber L ~ 125 cm, min. 120 x 40 mm	2	–
33	F.H. Bolt DIN 603 M8 x 100 MU	8	710240
34	ISO 7094 100 HV, A8	8	113347
35	TSS-Torx 6 x 40	20	024540
36	TSS-Torx 6 x 60	12	024470

*Important! The recess of the sliding hatch in the decking has a different size. Details are available on request.

Preparation

1. Cut recess 72 x 57 cm between the crossbeams in the planking. Remaining planking width on crossbeam: 10 cm.
2. Place timber (32) laterally on both sides under the pieces of planking. → Support.
3. Pre-drill end-to-end planking (min. 24 cm wide) and timber with Ø 8 mm: 4x in each case.
4. Screw on timber and end-to-end planking from above using 4x F.H. Bolt M8 x 100 MU (33) and Washer A8 (34) in each case.
5. Screw on pieces of planking and timber from above using 2x Torx 6 x 60 (36) in each case.

(Fig. A1.10)

Assembly

1. Place Hatch RCS 55 x 60-2, foldable (31) in the prepared recess. When opened, the hatch cover (31.1) points to the wall side. (Fig. A1.11a)
2. Screw on hatch frame and planking with approx. 20x TORX 6 x 40 (35).

Mount hatches and ladder access on corner platforms.
→ Free access to hatch possible.

Fig. A1.10

Fig. A1.11a

Fig. A1.11

A1.3 Mounting the brackets

From the working platform with Cross-beam SCS 190 or SCS 250 mount the brackets with the following components.
(Fig. A1.12a + A1.12b)

Pos.	Components per platform	Qty	Item no.
3	Vertical Strut SCS 237	2	118710
4	Diagonal Strut SCS 257	2	118714
5.3	Scaffold Tube $\varnothing 48.3 \times 3.2$, Special Length	3	026415
22	Swivel Coupling DK 48/48	2	017010
	Fitting Pin $\varnothing 26 \times 120$	3	111567
	Cotter Pin 5/1	3	022230

- Depending on the planned static height h_0 , the various M20 and M30 screw positions for connecting the crossbeams and diagonal struts to the vertical struts must be taken into consideration. (Fig. A1.13 / A1.14)
- The illustrations shown are for the Crossbeam Unit SCS 250.

Preparation

Loosen the screws and nuts and put to one side.

- 2x M20 on the Vertical Strut (3).
- 2x M30 on the Diagonal Strut (4).

Assembly

- Position the Vertical Struts (3) on a flat surface.
- Place supports under the Vertical Struts (here: timber and formwork girders).
→ Create 260 dimension.
- Attach crane lifting gear to the spindle connection point of the Carriage SCS 250 (2.1) or Crossbeam SCS 190 (1).
– Insert Fitting Pins $\varnothing 26 \times 120$ into the drilled holes of the spindle connection and secure with cotter pin 5/1.
– Attach crane slings to Fitting Pins.
- Lift working platform with the crane, and place crossbeam at the top end of the Vertical Strut. Support crossbeam head with a 2 cm board to prevent unit from tipping.
- Fix Vertical Struts (3) to the crossbeams (2) using bolts and Nuts M20 x 130. (Fig. A1.13a or A1.14a)
- Fix Diagonal Struts (4) to the crossbeams and Vertical Struts using bolts and Nuts M30 x 140. (Fig. A1.13b or A1.14b)
- Release crane lifting gear.

- Fix two parallel scaffold tubes to the Diagonal Struts.
- Align scaffold tubes at right angles to the Vertical Struts. Diagonally mount scaffold tube (5.3) to the horizontal scaffold tubes using swivel couplings (22).
→ Bracing.
(Fig. A1.13 or A1.14)

SCS 190

Fig. A1.12a

SCS 250

Fig. A1.12b

Bracket $h_0 = 2.58 \text{ m}$

Fig. A1.13

Bracket $h_0 = 2.40 \text{ m}$

Fig. A1.14

On working platforms with hatches, fix the diagonal scaffold tube at the top next to the hatch. As a result, any collision with the ladder is avoided.

Mount guardrails

Install Guardrail Post SCS 150

Pos.	Components per platform	Qty	Item no.
10	Guardrail Post SCS 150	2	118579

Preparation

1. Attach crane lifting gear to the cross-beam of the platform unit.
2. Remove cotter pins from Fitting Pins Ø 26 (1.2 + 1.3) and remove Fitting Pins from the adjusting unit (1.1).
3. One Fitting Pin (1.4) remains in the adjusting unit. (Fig. A1.16a)
4. Insert Fitting Pins (1.2 + 1.3) into the holes on the crossbeam and secure with cotterpins. (Fig. A1.16a + A1.16b)
5. Attach crane lifting gear to these two Fitting Pins (1.2 + 1.3).

Assembly

1. Loosen the 2 Bolts and Nuts M20 on the holder of the platform beam (9) and remove.
2. Fix Guardrail Post (10) to the Platform Beam (9) using the 2x Bolts and Nuts M20. (Fig. A1.16b)

- There are two options for anti-fall protection:
 - Standard handrail boards:
40 x 120 mm
 - Standard scaffold tubes:
Ø 48 x 3.2 mm.
- Fix by means of:
Guardrail Connection Plate ACS/SCS
or
Guardrail Connector CB.

SCS 190

Mount handrail boards

Pos.	Components - alternative	Qty	Item no.
14.1	Handrail boards 40 x 120 mm	3	–
	F.H. Bolt DIN 603 M8 x 100 MU	6	710240

1. Position board (14.1) on the Guardrail Post (10).
2. Align board with platform.
3. Pre-drill board.
4. Connect Guardrail Post and boards using F.H. Bolt M8 x 100 and Nut M8. (Fig. A1.14)

Mount scaffold tubes

Guardrail Connection Plate ACS / SCS

Pos.	Components - alternative	Qty	Item no.
5.3	Scaffold Tube \varnothing 48.3 x 3.2, Special Length	3	026415
14.2	Guardrail Connection Plate ACS / SCS	6	113762
	F.H. Bolt DIN 603 M8 x 100 MU	6	710240
14.3	Clamp A64 DIN 3570 M12	6	110296
	Nut ISO 4032 M12	12	710330

1. Fix Guardrail Connection Plate (14.2) to the holes on the Guardrail Post using F.H. Bolts M8 x 100 and Nuts M8.
2. Fix scaffold tubes (5.3) to the Guardrail Connection Plate using Clamp A64 M12 (14.3) and Nuts M12.
3. Repeat steps 1 and 2 twice.
(Fig. A1.17)

Fig. A1.17

Guardrail Connector CB

Pos.	Components - alternative	Qty	Item no.
5.3	Scaffold Tube \varnothing 48.3 x 3.2, Special Length	3	026415
14.4	Guardrail Connector CB	6	051160
	F.H. Bolt DIN 603 M8 x 70 MU	6	024140

1. Position scaffold tube (5.3) on the Guardrail Post.
2. Align scaffold tube with the platform.
3. Connect Guardrail Connector CB (14.4) to the Guardrail Post using F.H. Bolts M8 x 70 and Nuts M8.
4. Repeat steps 1 to 3 twice.
(Fig. A1.18)

Fig. A1.18

A1.4 Mount finishing platform.

During the assembly:

- Support Platform Beams (9) on square timbers.
- The centre lines of the brackets are offset to the Platform Beams and Guardrail Posts.
- Platform Post (11) is installed at a later time, see A2.4.
- Planking: thickness ≥ 40 mm.
Standard width 240 mm
Cut planking width ≥ 100 mm.
- For inclined applications, change the size of the platform as well as the size and position of the openings.

Pos.	Components per platform	Qty	Item no.
9	Platform Beam SCS 112	2	118583
10	Guardrail Post SCS 150	2	118579
13.1	Girder - here: VT 20	3	Length L
13.2	Girder Fixation M20	2	110330
	TSS-Torx 6 x 40	16	024540
	TSS-Torx 6 x 80 / per plank	4	024690
13.4	Planking 240 x 40 mm	Length L	–

Fig. A1.19

Assembly

1. Connect Girder (13.1) and Platform Beam (9) using the Girder Fixation M20 (13.2) and Torx 6 x 40 (2x per side of the fastening). (Fig. A1.19a + A1.19b)
2. Cut planking to the required size. (Fig. A1.19)
3. Mount planking at the end of the platform beam.
4. Align platform beam and planking at right angles to each other.
5. Fix planking on the girders using Torx 6 x 80 (2x per crossing). (Fig. A1.19b)
6. Cut out openings for the Platform Posts SCS 232 (11). (Fig. A1.19c)

Fig. A1.19a

Fig. A1.19b

Fig. A1.19c

Centre line of bracket

Mount guardrails.

Pos.	Components per platform	Qty	Item no.
10	Guardrail Post SCS 150	2	118579
13.5	Toe Board 30 x 150 mm	1	–
	F.H. Bolt DIN 603 M8 x 100 MU	2	710240

Pos.	Components - alternative	Qty	Item no.
14.1	Handrail board 40 x 120 mm	2	–
	F.H. Bolt DIN 603 M8 x 100 MU	4	710240
5.3	Scaffold Tube Ø 48.3 x 3.2, Special Length	2	026415
14.4	Guardrail Connector CB	4	051160
	F.H. Bolt DIN 603 M8 x 70 MU	4	024140

Mount Guardrail Post SCS 150

1. Loosen the 2 Bolts and Nuts M20 on the holder of the Platform Beam (9) and remove.
2. Fix Guardrail Post (10) to the Platform Beam (9) using the 2x Bolts and Nuts M20. (Fig. A1.20)

There are two anti-fall options:

- Standard handrail boards:
40 x 120 mm.
- Standard scaffold tubes:
Ø 48 x 3.2 mm

Mount handrail boards

1. Position board (13.5) on the Guardrail Post (10).
 2. Align board on the platform.
 3. Pre-drill board.
 4. Connect Guardrail Posts and boards using F.H. Bolts M8 x 100 and Nuts M8.
- (Fig. A1.20)

Mount scaffold tubes

1. Position scaffold tubes (5.3) on the Guardrail Posts.
 2. Align board on the platform.
 3. Fix Guardrail Connector CB (14.4) to the Guardrail Posts (10) using F.H. Bolts M8 x 70 MU, SW 13.
- (Fig. A1.21)

In case the finishing platform is to be transported to the jobsite, the guardrails will not be mounted until on the construction site itself.

Fig. A1.20

Fig. A1.21

A1.5 Mount concreting platform

- During the assembly, support the Platform Beams (9) on timbers.
- Mount the concreting platform to the Strongback (5) at a later time, see A3.3.
- For inclined applications, modify the platform dimensions as well as the size and position of the openings.
- The centre lines of the brackets are offset to the Platform Beams and Guardrail Posts.
- Cut planking: width ≥ 100 mm.

Pos.	Components per platform	Qty	Item no.
9	Platform Beam SCS 112	2	118583
10	Guardrail Post SCS 150	2	118579
13.1	Girder - here: VT 20	2	–
13.2	Girder Fixation M20	4	110330
	TSS-Torx 6 x 40	16	024540
	TSS-Torx 6 x 80 / per plank	4	024690
13.4	Planking 40 x 240 mm	Length L	–

Assembly

1. Connect Girder (13.1) and Platform Beam (9) using the Girder Fixation M20 (13.2) and Torx 6 x 40 (2x per girder). (Fig. A1.22 + A1.22a)
2. Cut planking to the required size.
3. Mount planking at the ends of the platform beam.
4. Align platform beam and planking at right angles to each other.
5. Fix planking on the girders using Torx 6 x 80 (2x). (Fig. A1.22b)
6. Cut out openings for the Strongbacks (5). (Fig. A1.22c)

Mount guardrails

Assembly procedure is identical to finishing platform, see A1.4 on previous page.

(Fig. A1.20 + A1.21)

Fig. A1.22

Fig. A1.22a

Fig. A1.22b

Fig. A1.22c

Centre line of bracket

A1.6 Mount side protection

Lateral guardrail is required to be installed on all end platforms without adjacent platforms.

There are two Guardrail Post options for guardrails:

- Guardrail Post SCS 150 with Guardrail Post Holder Multi.
- End Guardrail Post CB (integrated holder).

The following can be used for both Guardrail Posts:

- Handrail boards 40 x 120 mm.
- Toe Boards 30 x 150 mm.
- Scaffold tubes.

The scaffold tubes can be fixed with the following:

- Guardrail Connection Plate ACS/SCS.
- Guardrail Connector CB.

Standard guardrails

Guardrail Posts SCS 150 with Guardrail Post Holder Multi and handrail boards

Pos.	Components per platform	Qty	Item no.
10.1	Guardrail Post Holder Multi	2	126088
	TSS Torx 6 x 60	24	024470
10	Guardrail Post SCS 150	2	118579
	Bolt ISO 4014 M20 x 120	4	104477
	Nut ISO 7042 M20	4	781053
13.5	Toe Board 30 x 150 mm	1	–
	F.H. Bolt DIN 603 M8 x 45 MU	2	710295
14.1	Handrail boards 40 x 120 mm	2	–
	F.H. Bolt DIN 603 M8 x 100 MU	4	024140

Assembly

1. Fix Guardrail Post Holder Multi (10.1) to the platform girders using Torx 6 x 60 (6x per side) or M8 x 100 MU (6x).
 2. Insert Guardrail Post (10) into the Guardrail Post Holder Multi and connect using Bolts and Nuts M20 x 120.
 3. Fix Toe Board in bottom holes of the Guardrail Post using F.H. Bolts M8 x 70 MU.
 4. Fix two handrail boards in the holes of the Guardrail Posts using F.H. Bolts M8 x 100 MU.
- (Fig. A1.23 + A1.23a)

Alternatively, the Guardrail Post Holder Multi can also be fixed to the girders using F.H. Bolts DIN 603 M8 x 100 MU (6x per holder). (Fig. A1.23a)

SCS 250

Fig. A1.23

The length of the boards and tubes must correspond to the width of the platforms.

Fig. A1.23a

Alternative anti-fall protection

Assemble Guardrail Connection Plate ACS/SCS with scaffold tubes

Alternatively, mount scaffold tubes instead of boards 40 x 120 mm.
(Fig. A1.20)

Pos.	Components per platform	Qty	Item no.
5.3	Scaffold Tube Ø 48.3 x 3.2, Special Length	2	026415
14.2	Guardrail Connection Plate ACS/SCS	4	113762
	F.H. Bolt DIN 603 M8 x 100 MU	4	710240
14.3	Clamp A64 DIN 3570 M12	4	110296
	Nut ISO 4032 M8	8	710330

Assembly

1. Fix Guardrail Connection Plate (14.2) to guardrail post with F.H. Bolt M8 x 100 MU.
2. Cut scaffold tube (5.3) to required length.
3. Fix scaffold tube with Clamp A64 (14.3) and Nut M8 to the Guardrail Connection Plate.

(Fig. A1.24)

Fig. A1.24

Alternative guardrail posts

Alternatively, the scaffold tubes can be mounted with:

- **Guardrail Connector CB.**
(not shown)
- **End Guardrail Post CB. (Fig. A1.25)**

Assemble End Guardrail Post CB with Toe Boards

Pos.	Components per platform unit	Qty	Item no.
13.3	End Guardrail Post CB	2	051610
	Hex. Wood Screw DIN 571 6 x 80	10	051640
13.5	Toe Board 30 x 150 mm	3	–
	F.H. Bolt DIN 603 M8 x 100 MU	6	024140

1. Fix two End Guardrail Posts (13.3) using Hex. Wood Screws 6 x 80 (5x) at the end of the girders or timbers of each platform.
2. Place Toe Board (13.5) on the End Guardrail Post and align to the platform.
3. Pre-drill Toe Board (Ø 8 mm).
4. Fix Toe Board on End Guardrail Posts (13.3) using F.H. Bolts M8 x 100 MU.

(Fig. A1.25)

Fig. A1.25

A2.1 Anchoring of the Starter Brace Frame

Create a separate static calculation for:

- Anchoring of the Starter Brace Frame.
- Starter Brace Frame.

Before concreting the bottom slab

- Install anchor of Starter Brace Frame according to plan.
- Determine anchor spacing x_A depending on the formwork depth x_F :

$$x_A = x_F + 10 \text{ cm,}$$

e.g. VARIO with SRZ U100:

$$x_A = 46 \text{ cm}$$

(Abb. A2.01)

Fig. A2.01

Install anchoring of the Starter Brace Frame

Pos.	Components per Starter Bar	Qty	Item no.
20.1	Threaded Anchor Plate DW 15	2	030840
20.2	Tie Rod Special Length DW 15	2	030030
20.3	V-Tie Holder DW 15	2	031580
20.4	Leading Anchor Coupler DW 15	2	031631
20.5	Hex. Nut SW 30/108	2	030090

Assembly

1. Screw Threaded Anchor Plate DW 15 (20.1) onto Tie Rod DW 15 (20.2).
2. Connect tie rod with V-Tie Holder DW 15 (20.3).
3. Push anchor through the reinforcement.
4. Screw Leading Anchor Coupler DW 15 (20.4) onto tie rod. (Fig. A2.02a)
5. Fix Leading Anchor Coupler to the reinforcement using tie wire.
6. Before concreting: check anchoring depth and position.
7. Concrete bottom slab.
8. Allow bottom slab to harden.
9. Remove Leading Anchor Coupler (20.4).
10. Attach Hex. Nut DW 15 SW 30/108 (20.5) to Tie Rod DW 15 (20.2). (Fig. A2.02b)

Fig. A2.02a

Fig. A2.02b

We recommend concreting a starter base Δh as a stop in order to ensure the exact position and tightness of the formwork. (Fig. A2.01)

A2.2 Assembling the Starter Brace Frame

Pos.	Components per Starter Brace Frame	Qty	Item no.
5	Strongback SCS 235	2	118584
5.1	Spindle Connector SCS Ø 26/21	2	118580
5.3	Scaffold Tube Ø 48.3 x 3.2, Special Length	3	026415
6	Height Adjusting Unit CB, SCS	2	051030
7	Waler Fixation U100 - U120	4	110059
8	Heavy Duty Spindle SCS 198 - 250	2	118585
19	Starter Bar SCS 187	2	118799
22	Swivel Coupling DK 48/48	2	017010
28	Anchor Bolt PERI 14/20 x 130	2	124777

Fig. A2.03a

Assembly

1. Lay the Starter Bar (19) on the bottom slab.
2. Secure Strongback (5) to the formwork, see A3.1.
3. Secure concreting platform to the Strongbacks, see A3.3.
4. Attach crane lifting gear to the Strongbacks.
5. Move formwork with concreting platform to the Starter Bars (19) by means of the crane.
6. Connect Strongback and Starter Bar using Fitting Pins Ø 26.
7. Adjust length S of the two Heavy Duty Spindles (8).
8. Secure Heavy Duty Spindles using the two Fitting Pins Ø 26 and Cotter Pins 5/1.
 - at the top on the Spindle Connector (5.1),
 - at the bottom on the Starter Bar (19).
9. Screw Anchor Bolt PERI 14/20 x 130 (28) onto the end of the Starter Bar.
 - Secure against tipping.
10. Remove crane lifting gear.
11. Turn Heavy Duty Spindle (8) until the formwork has been vertically adjusted.
12. Mount scaffold tubes (5.3) with swivel couplings (22) on the Starter Bar. (Fig. A2.03a)
13. Spray Leading Anchor (15B) with release agent.
14. Secure the Leading Anchor (15B), see A2.6.
15. If a Tension Belt is to be fitted, a bottom Anchor (15A) is to be mounted. (Fig. A2.03)

Alternatives:

Every Starter Bar can - instead of being symmetrically anchored with two Tie Rods DW 15 - also be centrally anchored using one Tie Rod DW 20 or DW 26. (not shown)

Fig. A2.03

Installing the anchor fixations

There are two options:

- Waler SRU.
- Tie Yoke SCS.

Waler SRU

Pos.	Components with Waler SRU	Qty	Item no.
20.6	Tie Rod 0.5 m DW 15	2	030005
20.7	Waler SRU U120	1	according to L
20.8	Wingnut Pivot Plate DW 15	2	030370

- Max. anchor spacing = 35 cm.
- Perm. anchoring force per DW 15 = 90 kN.

The anchor may not be fitted in the slotted hole area of the Waler SRU otherwise the force is reduced to 70 kN per Tie Rod DW 15.

- Anchor inclination = 45°.

Assembly

1. Place Waler SRU (20.7) on two Starter Bars (19).
2. Push Tie Rod (20.6) through the Waler and screw into the Hex. Nut DW 15 SW 30/108 (20.5).
3. Tighten Wingnut Pivot Plate DW 15 (20.8) on the Tie Rod.

(Fig. A2.04)

Fig. A2.04

Tie Yoke SCS

Pos.	Components with Tie Yoke SCS	Qty	Item no.
20.6	Tie Rod 0.5 m DW 15	2	030005
20.9	Tie Yoke SCS	2	124630
20.10	Wingnut DW 15	4	030100

- Anchor spacing = 20 cm.
- Perm. anchoring force per DW 15 = 90 kN. (Fig. A2.05a)
- Anchor inclination $\geq 45^\circ$.

Assembly

1. Insert Tie Yoke SCS (20.9) into the hole of the Starter Bar (19).
 2. Insert Tie Rod (20.6) and screw into the Hex. Nut SW 30/108 (20.5).
 3. Screw Wing Nut DW 15 (20.10) onto the Tie Rod.
- Tie Yoke (20.9) is secured.
(Fig. A2.05)

SCS

Fig. A2.05a

Fig. A2.05

- Tie Yoke SRU - previous version.
 - With middle hole parallel to the holes on the side.
 - Limited to 65 kN anchoring force per Tie Rod DW 15.
- (Fig. A2.05b)

SRU – previous version.

Fig. A2.05b

Alternative:

Double Anchor Tie Yoke DSW

Item no. 027520 (not shown)

- Anchor spacing = 23 cm.
- Perm. anchoring force per DW 15 = 80 kN.
- Anchor inclination $> 45^\circ$, e.g. if starter is inclined forwards at a large angle, see B4.3.

A2.3 Initial use

Preparation

1. Loosen fixation of the Leading Anchor, see A2.7.
2. Strike starter formwork.
3. Install Mounting Ring (16)* on the bracket anchor (15B), see A2.8.
4. Attach crane lifting gear to the platform unit.
 - Pull cotter pins out of Fitting Pins $\varnothing 26$ (1.2 + 1.3) and Fitting Pins from the Adjusting Unit (1.1). (Fig. A2.06a)
 - One Fitting Pin (1.4) remains in the Adjusting Unit (1.1). (Fig. A2.06a)
 - Insert Fitting Pins $\varnothing 26$ (1.2 + 1.3) into the holes of the Crossbeam, and secure Fitting Pins with cotter pins. (Fig. A2.06)
 - Attach crane lifting gear to these two Fitting Pins.

*alternative: Mounting Bolt.

If the height of the Starter is insufficient, another configuration for the initial use is to be selected.

Min. $h_B = 3.00$ m for $c_2 = 35$ cm, see B3.1.

Suspend working platform unit

- **Persons are not to be transported!**
- **Do not transport any loose materials or other loads!**
- **Site personnel must keep clear of the danger area!**

1. Pull Locking Pins (2.3) and bring into climbing position, see A5.3.
2. Lift platform unit with the crane and move to required position.
3. Lower platform unit and insert crossbeam heads into the Mounting Rings (16). (Fig. A2.06)

Are both crossbeam heads completely and securely in the correct position? (Fig. A2.07a)

Fig. A2.06a

Fig. A2.06

Secure platform unit

1. Insert Locking Pins (2.3) in the securing position in order to prevent lift off, see A5.2.
2. If necessary, connect the platform unit with Tension Belts (12) and additional Following Anchor (15C) in the starter section, see A2.5.
3. Release crane lifting gear.
4. Re-insert Fitting Pins $\varnothing 26$ (1.2 + 1.3) in the Adjusting Unit and secure with cotter pins. (Fig. A2.06a)
→ Adjusting Unit and crossbeam are once again securely connected.

Fig. A2.07a

Place formwork

1. Secure formwork to the platform unit, see A3.4.
 2. Fix Leading Anchor (15A) to the formwork, see A2.6.
- (Fig. A2.07)

Troubleshooting

- If installation in the Mounting Ring is unsuccessful or the bracket jams, lift the platform and lower again.
- If the bracket spacing does not correspond to the spacing of the Mounting Rings, check the distance of the Leading Anchor to the formwork.
- If the mounting procedure is not possible, correct the bracket spacing by modifying the platform.

Fig. A2.07

A2.4 Connecting the finishing platform

For moving the climbing unit, use either crane lifting gear with Compression Brace or Lifting Beam.

Pos.	Components per platform unit	Qty	Item no.
11	Platform Post SCS 232	2	118578

Preparation

1. Loosen the Bolts M20 x 45 on the Platform Beam (9).
2. Secure the pre-assembled finishing platform to the Platform Post (11) using Bolts M20 x 45.

Connecting the finishing platform

1. SCS 250: completely retract the Carriage (2.1) and turn Heavy Duty Spindle (8) until the formwork reaches an angle of 2° to the rear. SCS 190: turn the Heavy Duty Spindle (8) until the formwork reaches an angle of approx. 8° to the rear.
→ Load bearing point is over the centre of gravity.
2. If necessary, release Tension Belt (12) from the Following Anchor.
3. Remove Locking Pin (2.3) and insert into one of the top holes in the Crossbeam, see A5.3.
→ Released position.
4. Attach crane lifting gear at the top to the Strongback (5).

Vacate platform

1. Lift the climbing unit (working and concreting platform) with the crane over the pre-assembled finishing platform.
2. Fix Platform Post (11) to the Vertical Strut (3) using Bolts M20 x 130. (Fig. A2.08)

Move climbing unit

1. Move extended climbing unit with the crane to the next casting segment and suspend from the Mounting Ring (16)*, see A5.1 - III. Move.
2. Mark out Crossbeam (1/2) with Locking Pins (2.3), see A5.2.
→ Secured position
3. Release crane lifting gear.

*alternative: Mounting Bolt.

Fig. A2.08

A2.5 Tension Belt

Risk of tipping for the climbing unit with:

- **high wall formwork.**
- **strong winds.**
- **forward-inclined formwork.**

Therefore install Tension Belt.

Pos.	Components per platform unit	Qty	Item no.
12	Tension Belt	2	051250
	Hex. Bolt ISO 4014 M20 x 120	2	104477
	Nut ISO 7042 M20	2	781053
12.1	Tension Belt Connector Wall M36	2	110469
12.2	Anchor M30: Bolt ISO 4017 M30 x 70	2	029420
12.3	Anchor M36: Bolt ISO 4017 M36 x 70	2	029430

Fix Tension Belt on the Crossbeam

1. Insert Hex. Bolt ISO 4014 M20 x 120 in the bottom hole of the rear Platform Beam Support of the Crossbeam (1/2) and secure using Nut ISO 7042 M20.
 2. Attach hook at the longer end of the Tension Belt (12) to the Bolt M20.
- (Fig. A2.09)

Fixing the Tension Belt to the Following Anchor

1. Secure Tension Belt Connector Wall M36 (12.1) to the Following Anchor (15C).
 - Anchor M30: Bolt ISO 4017 M30 x 70 (12.2).
 - Anchor M36: Bolt ISO 4017 M36 x 70 (12.3).
 2. Insert Tension Belt (12) on the inner side of the bracket and attach hook to the Tension Belt Connector Wall M36 (12.1).
 3. Adapt length of the Tension Belt and tighten using a ratchet lever (12.4).
- (Fig. A2.09)

Releasing the Tension Belt from the Following Anchor

1. Release Tension Belt with the ratchet lever (12.4). Remove Tension Belt from the Tension Belt Connector Wall M36 (12.1).
 2. Remove Following Anchor (15C) and close anchor hole, see A2.9.
- (not shown)

When not in use, wrap the Tension Belt around the guardrail of the finishing platform and secure.

Fig. A2.09

Tools

Ratchet Lever SW 19 (Item no. 027180)

A2.6 Fixing the Leading Anchor

Standard Advancing Bolt

Use Advancing Bolt with constant anchor positions.

Is there sufficient spacing between the anchor point and the adjoining formwork girder, see B1.3.

If not, use Anchor Positioning Stud or offset the formwork.

- Fix Threaded Anchor Plate (15.3/15.9) to the reinforcement using wire.
 - Contact surface of the climbing cone is flush with the formwork panel.
- Spray the climbing cone with a release agent before installation.
 - Facilitates removal.

Mount Advancing Screw M30

Pos.	Components per anchor point - M30	Qty	Item no.
15.1	Climbing Cone-2 M30/DW 20	1	030920
15.2	Tie Rod Special Length DW 20	1	030700
15.3	Threaded Anchor Plate DW 20	1	030860
15.4	Advancing Screw M30	1	029450
15.5	Anchor Positioning Plate M30	1	029380
	Hex. Wood Screw DIN 571 6 x 20	4	029440

Fig. A2.10a

Preparation

1. Measure out the position of the Leading Anchor and mark on the surface of the formlining.
2. Drill hole Ø 32 mm in the formlining.

Assembly

1. Screw Anchor Positioning Stud M30 (15.5) onto the rear side of the formlining using 4 Hex. Wood Screws Ø 6 x 20.
2. From the rear, insert Advancing Screw M30 (15.4) through the hole.
3. Turn the Leading Anchor (Pos.15.1, 15.2 + 15.3) from the front side on the Advancing Screw (15.4) and tighten by hand.

(Fig. A2.10a)

Tool

Ratchet Wrench ½" with Socket SW 19-½" L.

Before concreting:

Check all individual components of the Leading Anchor, its assembly and the position of the anchor.

Mount Advancing Screw M36

Pos.	Components per anchor point - M36	Qty	Item no.
15.7	Climbing Cone-2 M36/DW 26	1	030940
15.8	Tie Rod Special Length DW 36	1	030340
15.9	Threaded Anchor Plate DW 26	1	030870
15.10	Bolt ISO 4017 M36 x 70	1	029430
15.11	Anchor Positioning Plate M36	1	029390
	Hex. Wood Screw DIN 571 6 x 20	4	029440

Fig. A2.10b

Preparation

1. Measure out the position of the Leading Anchor and mark on the surface of the formlining.
2. Drill hole Ø 38 mm in the formlining.

Assembly

1. Screw Anchor Positioning Stud M36 (15.11) onto the rear side of the formlining using 4 Hex. Wood Screws Ø 6 x 20.
2. From the rear, insert Bolt ISO 4017 M36 x 70 (15.10) through the hole.
3. Turn the Leading Anchor (Pos.15.7, 15.8 + 15.9) from the front side on the Bolt M36 (15.10) and tighten by hand.

(Fig. A2.10b)

Tool

Ratchet Wrench 1" with Socket SW 55-1"

Before concreting:

Check all individual components of the Leading Anchor, their assembly and the position of the anchor.

Alternative Anchor Positioning Stud

Use if:

- the anchor position is not constant.
- the girder is in the anchor position.
- panel formwork is used.

- Fix Threaded Anchor Plate (15.3 / 15.9) to the reinforcement using wire.
 - Contact surface of the climbing cone is flush with the formwork panel.
- Spray the climbing cone with a release agent before installation.
 - Facilitates removal.

Mount the Anchor Positioning Stud M30

Pos.	Components per anchor point - M30	Qty	Item no.
15.1	Climbing Cone-2 M30 / DW 20	1	030920
15.2	Tie Rod Special Length DW 20	1	030700
15.3	Threaded Anchor Plate DW 20	1	030860
15.6	Advancing Screw M30	1	026450
	Wire Nail 3 x 80	6	710312

Fig. A2.11a

Preparation

Measure out the position of the Leading Anchor and mark on the surface of the formlining.

Assembly

1. Fix the Anchor Positioning Stud (15.6) to the front side of the formlining using 6 wire nails 3 x 80 mm.
2. Turn the Leading Anchor (Pos.15.1, 15.2 + 15.3) from the front side on the thread of the Anchor Positioning Stud (15.6) and tighten by hand.

(Fig. A2.11a)

Before concreting:

Check all individual components of the Leading Anchor, their assembly and the position of the anchor.

Mount the Anchor Positioning Stud M36

Pos.	Components per anchor point - M36	Qty	Item no.
15.7	Climbing Cone-2 M36/DW 26	1	030940
15.8	Tie Rod Special Length DW 26	1	030340
15.9	Threaded Anchor Plate DW 26	1	030870
15.12	Anchor Positioning Stud M36	1	026460
	Wire Nail 3 x 80	6	710312

Fig. A2.11b

Preparation

Measure out the position of the Leading Anchor and mark on the surface of the formlining.

Assembly

1. Fix the Anchor Positioning Stud (15.12) to the front side of the formlining using 6x wire nails 3 x 80 mm.
2. Turn the Leading Anchor (Pos.15.7, 15.8 + 15.9) from the front side on the thread of the Anchor Positioning Stud (15.12) and tighten by hand.

(Fig. A2.11b)

Before concreting:

Check all individual components of the Leading Anchor, their assembly and the position of the anchor.

A2.7 Releasing the Leading Anchor

Preparation

Remove all connections, e.g. couplings, to the formwork elements of the adjacent climbing units.

In the following, the size M36 is shown. The same applies for the M30.

Standard

Release Advancing Screw

1. Release all Advancing Screws (15.4) from the rear of the formlining and remove.
2. Release the formwork using the Heavy Duty Spindle, see A4.2.
3. Remove formwork with Adjusting Unit (see A4.4) or with Carriage (see A4.5). (Fig. A2.12)

Fig. A2.12

Tool

M30: Ratchet Wrench ½" with Socket SW 19-½" L.

M36: Ratchet Wrench 1" with Socket SW 55-1".

Alternative

Release Anchor Positioning Stud

1. Straighten wire nails.
2. Turn Heavy Duty Spindle.
→ Formwork is opened and Nails Ø 3 x 80 are pulled through the formwork surface. (Fig. A2.13a)
3. Remove formwork with Adjusting Unit (see A4.4) or with Carriage (see A4.5).
4. Straighten Wire Nails Ø 3 x 80 with a hammer.
→ Injuries can be avoided.
5. Release Anchor Positioning Stud (15.6) with Allen Key SW 14 and remove. (Fig. A2.13b)

Fig. A2.13a

Fig. A2.13b

Tool

Allen Key SW 14*.

*For older Anchor Positioning Stud type, use Allen Key SW 12.

A2.8 Mounting Ring or Mounting Bolt

The Mounting Ring or Mounting Bolt is screwed into the Climbing Cone of the Leading Anchor.

→ Bracket Anchor.

Function: suspending the platform or climbing units.

Types, dimensions and application of the fixing according to the following table.

Application	Fixing	Size	
		M30	M36
Standard	Mounting Ring	x	x
Alternative	Mounting Bolt	–	x

- Determine the load-bearing capacity in accordance with the separate SCS dimensioning information.
- One anchor point per bracket is required.

Bracket Anchor M30

Pos.	Components per anchor point	Qty	Item no.
15.1	Climbing Cone-2 M30/DW 20	1	030920
16.1	Mounting Ring SCS M30	1	118582

Mounting Ring M30

Fig. A2.14

Tool

Ratchet Wrench 1" with Socket SW 46-1"

Installation:

Screw in Mounting Ring or Mounting Bolt into the thread of the Climbing Cone-2 until completely tight.

→ Bracket Anchor.

Removal:

Release the Mounting Ring or Mounting Bolt and remove.

Bracket Anchor M36

Pos.	Components per anchor point	Qty	Item no.
15.7	Climbing Cone-2 M36/DW 26	1	030940
16.2	Mounting Ring SCS M36	1	118772
16.3	Mounting Bolt SCS M36	1	118769

Mounting Ring M36

Tool

Ratchet Wrench 1" with Screwdriver Bit SW 27-1"

Alternative

Mounting Bolt M36

Fig. A2.15b

Tool

Ratchet Wrench 1" with Screwdriver Bit SW 27-1"

A2.9 Closing the Anchor Hole

For architectural concrete or waterproof concrete, seal the anchor hole with PERI Concreting Cone KK, see PERI Tie Technology.

Pos.	Components per anchor point	Qty	Item no.
29.1	KK Concreting Cone M30-80/52	1	031653
29.2	KK Concreting Cone M36-90/52	1	031654
	PERI Sealing Compound-2	1	108136

Follow the Instructions for Use for concreting cones and Safety Data Sheet for sealing compounds.

Assembly

- 1. Release Climbing Cone (15.1/15.7).
- 2. Unscrew the Climbing Cone by hand and remove. (Fig. A2.16a)
- 3. Spread front conical part of the KK Concreting Cone (29.1/29.2) with prepared sealing compound.
- 4. Insert KK Concreting Cone in the anchor hole.
→ Anchor hole is closed. (Fig. A2.16b)

Tool for Climbing Cone M30/DW 20:
Ratchet Wrench 1" with Socket SW 46-1"
M36/DW26:
Ratchet Wrench 1" with Socket SW 55-1"

Fig. A2.16a

Fig. A2.16b

A2.10 Mounting the Access Ladder

There are two different versions of ladder that are connected to the hatch.

- Ladder 180/6 bolted.
- End Ladder 180/2 complete. suspended.

The number of components varies according to the concreting height:

2.00 m - 3.00 m.
3.00 m - 3.90 m.

Install Ladder 180/6

(Fig. A2.17)

Concreting height h_B [m]				2,00–3,00	3,00–3,90
Spacing between the planking h_{NLB} [m]				3,29	3,92
Pos.	Item no.	Components per anchor point	Qty		
31	126431	Hatch RCS 55 x 60-2. foldable	1	1	
38	051410	Ladder 180/6	2	2	
39	103718	Ladder Hook	2	–	
40	109105	Ladder Base 30	1	1	
41	051450	Ladder Safety Cage 150	–	1	
42	104132	Ladder Safety Cage 75	1	–	
43	024540	TSS-Torx 6 x 40	3	3	

Fig. A2.17

Install End Ladder 180/2 complete

(Fig. A2.18)

Concreting height h_B [m]				2,00–3,00	3,00–3,90
Spacing between the planking h_{NLB} [m]				3,29	3,92
Pos.	Item no.	Components per anchor point	Qty		
31	126431	Hatch RCS 55 x 60-2, foldable	1	1	
37	103724	End Ladder 180/2 complete	1	1	
38	051410	Ladder 180/6	2	2	
39	103718	Ladder Hook	2	2	
40	109105	Ladder Base 30	1	1	
41	051450	Ladder Safety Cage 150	–	1	
42	104132	Ladder Safety Cage 75	1	–	
43	024540	TSS-Torx 6 x 40	3	3	

- The distance of the ladder rungs to the handrail boards of the finishing platform must be min. 15 cm. Therefore, install the ladder at an angle.
- Assembly of the hatch (31) in the working platform, see A1.6.

As an alternative to Hatch RCS 55 x 60-2 (31), Hatch 55 x 60, foldable (Item no. 110608) can also be installed.

Fig. A2.18

Ladder combinations

- Top: End ladder 180/2 (37), and below: Ladder 180/6 (38).
- Top and below: 2x Ladder 180/6 (38).

Pre-assembly of ladder

1. Loosen Bolts and Nuts M12 x 40 of the top ladder (37/38) and remove.
2. Connect both ladders with Bolts and Nuts M12 x 40. (Fig. A2.19)
3. If the bottom ladder is suspended:
 - Loosen Bolts and Nuts M12 x 25 on the Ladder Hook and remove.
 - Fix Ladder Hook (39) to Ladder 180/6 (38) at the top using Bolts and Nuts M12 x 25. (Fig. A2.20)
 - Attach the two Ladder Hooks of the to-be mounted Ladder 180/6 (38) on the rungs of the bottom ladder (37/38) and pull downwards. (Fig. A2.21)

Are the rungs of both ladders positioned at the same height? (Fig. A2.21)

Fig. A2.19

Ladder Base

Mounting the ladder base:

1. Fix the holder (40.1) of the Ladder Base to the bottom Ladder 180/6 (38) using Bolts and Nuts M12 x 40.
2. Pull out base rung (40.2) of the Ladder Base (40) to the required length.

Fixing the ladder base

Fix base rung (40.2) of the Ladder Base (40) to the planking of the finishing platform using 3x Torx 6 x 40 (43).

Fig. A2.20

Fig. A2.21

Ladder versions for access

- Ladder 180/6 bolted.
- End Ladder 180/2 suspended.

Ladder 180/6 bolted.

1. Open Hatch Cover (31.1).
2. Lift pre-assembled ladder (38 + 38) with the crane into the Hatch.
3. Fix ladder to the Hatch on both sides from the top using 2x Bolts and Nuts M12 x 40.

(Fig. A2.22a)

Fig. A2.22a

End Ladder 180/2 suspended.

1. Open Hatch Cover (31.1).
2. Lift pre-assembled ladders (37 + 38) with the crane into the Hatch and lower so that the top rung of the ladder lies in the U-profile of the Hatch.
3. Insert cotter pin (31.2) into the holder on the hatch - on both sides.
→ Ladder is secured against tipping.

(Fig. A2.22b)

Fig. A2.22b

Mounting the Ladder Safety Cage

Mounting the Ladder Base:

1. Bring the Ladder Safety Cage (41/42) into position on the ladder using a rope from below and hold.
2. Fasten Safety Cage 2x above: slightly loosen Bolts M12 x 25 of the Clamping Plate (38.1).
→ Clamping Plate turns in the direction of insertion position.
(Fig. A2.23a)
Position Clamping Plate on the ladder longitudinal members, turn and tighten bolts. (Fig. A2.23b)
→ Clamping position.
3. Fasten Safety Cage 2x below - as above, see Point 2.
(Fig. A2.23 - shown without Hatch)

Fig. A2.23

Insertion position

Fig. A2.23a

Clamping position

Fig. A2.23b

A3.1 Fixing the Strongback to the Formwork

Preparation

Formwork assembly

Follow the Instructions for Assembly and Use for VARIO GT 24 Girder Wall formwork and the project-related formwork plans.

Standard configurations

Bracket

$a = 459 \text{ mm}$, $c_2 = 350 \text{ mm}$
 $\rightarrow h_F = 661 \text{ mm}$

Starter Brace Frame

$a = 459 \text{ mm}$, $\Delta h = 100 \text{ mm}$
 $\rightarrow h_F = 460 \text{ mm}$

c_2 see Fig. B2.01
 Δh see Fig. A2.01

Fig. A3.01

Pos.	Components per formwork	Qty	Item no.
5	Strongback SCS 325	2	118584
5.1	Spindle Connector SCS Ø 26-21	2	118580
5.2	Spacer M20-82	2	110022
6	Height Adjusting Unit CB, SCS	2	051030
7	Waler Fixation U100 - U120	4	110059

Assembly

- Place Strongback (5) on the steel waler of the formwork and align roughly at height h_F . (Fig. A3.01)
- Install Height Adjusting Unit (6) using Bolts Ø 25. Ensure that there is sufficient adjusting range available for required formwork adjustment.
- Turn Spindle (SW 19) of the Height Adjusting Unit (6) against the U-profile of the Strongback and adjust to height h_F . (Fig. A3.01a)
- Bring Spindle Connector (5.1) to height h_{sp} . (Fig. A3.01 + A3.01b) For this, possibly offset one spacer (5.2) of the Strongback:
 - Release Bolt and Nut M20 of the spacer.
 - Remove spacer tube in the Strongback.
 - Fix Spindle Connector (5.1) using Fitting Pins Ø 21.
 - Insert spacer tube in the next free hole.
 - Insert Bolt and Nut M20 and tighten.
- Align Strongback (5) to formwork element. Take bracket spacing c into consideration as well as edge distances d_1 and d_2 . (Fig. A1.01 or A1.02)
- Fix Strongback on the formwork walers with Waler Fixation (7). (Fig. A3.01a)
- Check the spacing of the Strongback (corresponds to bracket spacing c) at the bottom end and correct if necessary. (Fig. A3.02)
- Securely fix Waler Fixation (7) using wingnut. (Fig. A3.01a)

"A" - Height Adjusting Unit detail

Fig. A3.01a

"B" - Spindle Connector detail

Fig. A3.01b

A3.2 Installing the Compression Brace

For moving the climbing unit, use either crane lifting gear with Compression Brace or Lifting Beam.

L = length
c = bracket spacing
L = c – 96 mm

Abb. A3.02a

Pos.	Components per formwork	Qty	Item no.
5.4	Timber 10 x 10 cm or according to the plan	1	–
5.5	Hex. Wood Screw DIN 571 8 x 160	2	024520
5.6	Washer ISO 7094 A8	2	113347

Assembly

Fix timber (5.4) between the two Strongbacks (5) using Hex. Timber Screws 8 x 160 (5.5) and Washer A8 (5.6).

(Fig. A3.02 + A3.02a)

Fig. A3.02

A3.3 Installing the Concreting Platform

Assembly

1. Lift concreting platform over the formwork element using textile straps.
2. Fix Platform Beam (9) to the right U-profile of the Strongback (5) using Bolts M20 x 45.

(Fig. A3.03 + A3.03a)

Inclined formwork

In order to realize the most horizontal working platform possible with inclined formwork, incline the platform $\pm 15^\circ$ or $\pm 30^\circ$ towards the Strongback (5). For this, select the corresponding hole in the connection plate of the Platform Beam (9) for the bottom bolt.

(Fig. A3.04)

Depending on the inclination, change:

- Width of the platform,
- position of the girder and
- opening for the Strongback.

The finishing platform can also be fixed to the Platform Post (11) in an inclined position, see B5.

Fig. A3.03

Bolted connection

Fig. A3.03a

Fig. A3.04

A3.4 Fixing the formwork to the brackets

- The working platform unit is suspended and secured against lifting by means of Locking Pins.
- For moving the formwork, use either crane lifting gear with Compression Brace or Lifting Beam.

Preparation

1. If necessary, install Tension Belts on the brackets, see A2.5.
→ Tipping is prevented.
2. Remove Fitting Pins (1.2 + 1.3 + 1.4) from the Crossbeam Units and place to one side.

Assembly

1. SCS 250: retract Carriage (2.1) and fix in position using two Fitting Pins $\varnothing 26$ (1.2 + 1.4) respectively, see A4.5.
2. Move back the sliding unit (1.5) in the Adjusting Unit, see A4.4.
3. Adjust Heavy Duty Spindle (8) to length S, lean against the guardrails and secure against tipping.
4. Attach crane lifting gear to the top spacer in the Strongback (5).
5. Move formwork with the crane to the platform.
6. Guide Strongback (5) with the crane over the Adjusting Unit (1.1) so that the holes are congruent.
7. Connect Strongback and Adjusting Unit:
 - Insert Fitting Pins (1.3) through the holes in the sliding unit (1.5) and Strongback.
 - Secure Fitting Pins with cotter pins.
8. Set formwork vertically.
9. Position Heavy Duty Spindle (8) in the Spindle Connector (5.1).
10. Connect Heavy Duty Spindle (8) and Spindle Connector:
 - Insert Fitting Pins $\varnothing 26$ in holes of the Spindle Connector.
 - Secure Fitting Pins with cotter pins.
11. Release crane lifting gear.
12. Align formwork, see A4.1 to A4.5. (Fig. A3.05)

Fig. A3.05

A3.5 Exchanging the formwork

The platform unit is suspended and secured against lifting by means of Locking Pins.

Pos.	Components per platform unit	Qty	Item no.
5.2	Spacer M20-82	2	110022
5.3	Scaffold Tube Ø 48.3 - Special Length	2	026415
5.7	Scaffold Tube Ø 48.3 - 82 mm.	1	026415
12	Tension Belt	2	051250
22	Swivel Coupling DK 48/48	2	017010
30	Crane Splice 24	2	070760

Preparation

1. Install Tension Belt. see A2.5.
→ Tipping of the working platform is prevented.
2. Temporarily brace the Strongback (5).
 - Loosen bolt of Spacer (5.2) in the Strongback. (Fig. A3.06a)
 - Insert scaffold tube piece (5.7) above the spacer tube of the Spacer.
 - Re-install Spacer. (Fig. A3.06a) Carry out procedure on one Strongback above and with the other one below.
→ Lateral movement of the concreting platform is prevented.
 - Diagonally fix scaffold tube Ø 48.3 (5.3) to the scaffold tube pieces (5.7) using Swivel Couplings DK 48/48 (22).
 - Bracing. (Fig. A3.06b)

Fig. A3.06a

Fig. A3.06b

Fig. A3.06

Follow the Instructions of Use for the Crane Splice 24.

Assembly

1. **SCS 190:** incline Strongback to the rear (2x), see A4.1.
- SCS 250:** retract Carriage (2.1) and secure with Fitting Pins Ø 26 (1.2 + 1.4) (2x), see A4.5. Move back the sliding unit (1.5) in the Adjusting Unit (1.1) (2x), see A4.4.
2. Fix Crane Splices (30) to the formwork.
3. Fix crane lifting gear and tension.
4. Open Waler Fixation (7) and remove (4x).
5. Carefully lift the formwork with the crane. If necessary, adapt Adjusting Unit (6) or offset (2x).
6. Lift in new formwork element with the crane.
7. Lower formwork waler onto the Adjusting Unit.
8. Insert Waler Fixation (7) and clamp formwork to prevent tipping (4x).
9. Align formwork, see A4.1 to A4.5.
10. Remove crane lifting gear.
11. Remove Crane Splice (30) from the formwork element.
12. Remove bracing.

- In order to avoid that the crane hook has been incorrectly attached, do not leave any load-bearing points on the formwork!
- The load-bearing point used to move the climbing unit is positioned on the Strongback. (Fig. A3.06)

A4.1 Adjusting the formwork inclination

Assembly

1. Place a spirit level on the rear side of the Strongback.
2. Turn (2x) the Heavy Duty Spindle (8).
→ Formwork inclination is adjusted.
(Fig. A4.01)
3. If necessary, re-adjust (2x) the sliding unit (1.5) in the Adjusting Unit (1.1).

In case there is insufficient space for the sliding unit to move as required, e.g., with large inclinations, re-position the Adjusting Unit (1.1) by re-setting, see A4.4.

Fig. A4.01

A4.2 Vertically aligning the formwork

Assembly

1. Position a spirit level on the formwork waler.
2. Slightly open (4x) the Waler Fixation (7).
3. Turn (2x) Adjusting Bolt of the Adjusting Unit (6).
→ Formwork is height adjusted.
4. Close (4x) the Waler Fixation (7).
(Fig. A4.02)

Fig. A4.02

A4.3 Horizontally aligning the formwork

Assembly

1. Slightly open (4x) the Waler Fixation (7).
2. Horizontally move the formwork.
3. Re-close (4x) the Waler fixation.
4. Check the position of the Anchor Positioning Stud or Anchor Positioning Plate.
(Fig. A4.03)

Fig. A4.03

Tool

Hammer or Tie Rod DW 15.

A4.4 Operating the adjusting unit

Adjust the formwork using the Adjusting unit (1.1). In the process, the base of the formwork is carefully pushed against the previous concreting section or moved away.

Adjusting range:

±45 mm from the centre.

Closing the formwork

Turn (2x) the Adjusting Bolt SW 30 (1.6) of the Adjusting Unit in an anti-clockwise direction.

→ The sliding unit (1.5) with the Fitting Bolts Ø 26 (1.3) moves forward and thereby carefully pushes the formwork tightly against the previous concreting section. (Fig. A4.04)

Opening the formwork

1. Turn (2x) the Heavy Duty Spindle (8). (Fig. A4.01)

2. Turn (2x) the Adjusting Bolt SW 30 (1.6) of the Adjusting Unit in a clockwise direction.

→ The sliding unit (1.5) with the Fitting Bolts Ø 26 (1.3) moves to the rear and thereby pushes the formwork away from the previous concreting section. Formwork moves away from the concrete. (Fig. A4.04)

Tool

Ratchet Wrench ½" with Socket SW 30 ½".

- In case there is insufficient space for the sliding unit to move as required, e.g., with large inclinations, re-position the Adjusting Unit (1.1).
→ Adjusting Unit is in another position.
- Hole spacing in Crossbeam: 62.5 mm.

Fig. A4.04

Re-set Adjusting Unit.

SCS 190

1. Attach crane lifting gear at top to the walers and hold the formwork in position with the crane.
→ Formwork is secured against tipping.
2. Remove (2x) Fitting Pins (1.2 + 1.3):
– Remove cotter pins from the Fitting Pins.
– Remove Fitting Pins from the holes.
3. Move (2x) the Adjusting Unit.
4. Re-install (2x) the Fitting Bolts (1.2 + 1.3):
– Insert Fitting Pins into holes of the Crossbeam Unit and Adjusting Unit.
– Insert cotter pins in holes of the Fitting Pins.
→ Adjusting Unit is in a secured position.

SCS 250

Operating the Carriage, see A4.5.

A4.5 Operating the Carriage

Only the SCS 250 has a Carriage.

The Carriage SCS has two functions:

- Shuttering and striking.
- Working area in front of the formwork.

- Operate both Carriages of a platform simultaneously in order to avoid any jamming.
- The maximum retraction distance depends on the formwork assembly, e.g. VARIO GT 24: max. retraction distance $x_r = 625$ mm.

After concreting:

1. Turn the Heavy Duty Spindle.
→ Formwork is released from the concrete.
2. Remove Fitting Pins (1.2 + 1.4):
– Remove cotter pins from the Fitting Pins.
– Remove Fitting Pins from the holes.
3. Turn gear wheel drive (1.7).
→ Formwork moves.
4. Bring Carriage (2.1) in the end position.
5. Re-install Fitting Pins (1.2 + 1.4).
– Insert Fitting Pins in the holes of the Crossbeam Unit and Adjusting Unit.
– Secure Fitting Pins with cotter pins. (Fig. A4.05)
6. Press formwork against the previous concreting section with the Adjusting Unit (1.1), see A4.4 - Close the formwork

Fig. A4.05

Are cotter pins inserted into both Fitting Pins (1.2 + 1.4)?

Tool

Ratchet Wrench $\frac{1}{2}$ " with Socket SW 19- $\frac{1}{2}$ " L.

A5.1 Moving procedure

- Retract components only when the concrete has sufficiently hardened and the person in charge has given the go-ahead for striking to take place.
- Suspending the climbing units on the next concreting section is only allowed after the required concrete strength has been reached.
- For moving the climbing unit with widened crane lifting gear, install a Compression Brace between the Strongbacks, see A3.2.
- During the moving procedure, ensure that components are picked up and set down so that unintentional falling over, falling apart, sliding, falling down or rolling is avoided.
- When moving the climbing units, always use a guide rope.
- Mount lateral side protection so that open edges are secured.
- Plan access ways and respective sequences. Secure emergency escape routes must always be available.
- Do not transport persons! Exceptions to this can be determined through the operational working and assembly instructions on the basis of a corresponding risk assessment.
- Do not transport any loose materials or other loads.
- As a result of the moving procedure, falling edges are formed between the platforms. These areas are to be cordoned off.
- In case of a malfunction, lower the platform to the next possible position, personnel are to leave the climbing unit in a safe and secure manner and an authorized person is to be notified immediately!

For moving an asymmetrical climbing unit, we recommend using the Lifting Beam RCS 10 t.

For this, follow the Instructions for Use for the Lifting Beam RCS 10t.

The moving procedure consists of the following:

- I. Preparation
- II. Moving
- III. Mounting
- IV. Finishing Work

For a detailed description with photos for each individual step of the moving procedure, see the following pages.

Guiding the climbing units

Fig. A5.01

I. Preparation

1. Release Tension Belt (12) from the Following Anchor (15C), see A2.5.
2. Remove all the couplings or connections to formwork elements on the adjacent climbing units.
3. Anchor position A:
Fix Mounting Ring* (16) to Leading Anchor (15), see A2.7.
4. The climbing unit should be suspended at an inclination of approx. 2° on the crane lifting gear, see Fig. A5.02a. To do so
SCS 250: completely retract the Carriage and incline formwork approx. 2° to the rear, see A4.5 and A4.1.
SCS 190: incline formwork approx. 8° to the rear, see A4.1. or, if necessary, determine inclination of the climbing unit by trial or error.
Anchor position C:
Remove Climbing Cone (15.1/15.7) and close anchor holes where required, see A2.9.
5. Remove all loose components from the climbing unit.
(Fig. A5.02)

*alternative: Mounting Bolts.

II. Moving

During the moving procedure, site personnel are not allowed to remain on the platform!
Therefore, take Point 3 into consideration and leave the platform.

1. Fix crane lifting gear at top to the Strongbacks (5).
2. Bring Locking Pins (2.3) into the climbing position, see A5.3.
3. **Leave the platform.**
4. Lift climbing unit out of the Mounting Rings*.
The pressure point should be approx. 5 - 10 cm away from the wall.
5. In case the bracket jams, correct the formwork inclination.
6. Anchor position from C to B:
Move the climbing unit to the next climbing anchor (15).
(Fig. A5.03)

III. Mounting

Fig. A5.04

Anchor position B:

1. Lower Crossbeam and mount in the Mounting Rings* (16).
2. Enter platform and immediately re-insert Locking Pins (2.3) in the securing position, see A5.2.
→ Platform unit is suspended and lifting off is prevented.

(Fig. A5.04)

Are both Crossbeam Heads suspended in the corresponding Mounting Rings*?

Troubleshooting

- If installation in the Mounting Ring is unsuccessful or the bracket jams, lift the platform and lower again.
- If the bracket spacing does not correspond to the spacing of the Mounting Rings, check the distance of the Climbing Anchor to the formwork.
- If the mounting procedure is not possible, correct the bracket spacing by modifying the platform.

IV. Finishing Work

Fig. A5.05

1. Release crane lifting gear.
 2. Anchor position C:
 - Remove Mounting Ring* (16) from the Following Anchor (15), see A2.8.
 - If necessary, attach Tension Belt (12) to the Following Anchor, see A2.5.
 3. Anchor position A:
 - Mount the Leading Anchor (15) on the formwork, see A2.6.
- (Fig. A5.05)

A5.2 Secured Position - Locking Pins

During all work procedures on the working platform, e.g. concreting, each bracket must be secured against lifting by means of a locking pin (2.3) in the securing position under the Mounting Ring * (16).

Securing

1. Insert locking pin (2.3) under the Mounting Ring* (16) through the bottom hole of the crossbeam unit.
2. Secure locking pins by means of cotter pins (2.6). (Fig. A5.06a)
3. Place shaft (2.5) of the locking pin behind the stop plate (2.4).
→ Climbing unit is secured.
(Fig. A5.06)

The securing position is also the transport and storage position of the locking pin in the crossbeam unit.

*alternative: Mounting Bolt.

Fig. A5.06

"X"

View from the rear

Fig. A5.06a

A5.3 Released Position - Locking Pins

Moving

During the climbing procedure, the locking pins (2.3) are stored in the climbing position.

During the mounting procedure, the locking pins (2.3) must not collide with the Mounting Ring* (16).

Release

1. Insert locking pin (2.3) in one of the top holes of the crossbeam.
2. Insert cotter pin (2.6) in the shaft (2.5) of the locking pin.
→ Climbing position
(Fig. A5.07 + A5.07a)

*alternative: Mounting Bolt.

Fig. A5.07

“Y”

View from the front

Fig. A5.07a

A6 Dismantling the Climbing Formwork

During the dismantling procedure, additional open slab edges are created. These areas must be cordoned off or secured using other suitable measures! These measures are described in the risk analysis provided by the contractor.

For assembly work carried out on non-secured slab edges and when removing the climbing anchors, personal protective equipment (PPE) is to be used.

Dismantling the formwork unit

1. Remove formwork.
 2. Attach crane lifting gear to the Strong-backs (5).
 3. Tension the crane lifting gear.
 4. Remove top Fitting Pins Ø 26 from the Heavy Duty Spindle (8) and then lean the Spindle against the guardrails and secure against falling.
 5. Remove Fitting Pins Ø 26 (1.3) from the Adjusting Unit (1.1).
 6. Lift formwork with the crane and move to dismantling area.
 7. Remove Heavy Duty Spindle.
- (Fig. A6.01)

Removing the platform unit

1. Release Tension Belt (12).
 2. Fix crane lifting gear to both Fitting Pins in the Crossbeam (1.2 + 1.4), see A2.3.
 3. Bring Locking Pins (2.3) into the climbing position, see A5.3.
 4. Personnel are to leave the working platform.
 5. Lift platform unit out of the Mounting Rings and move to the dismantling area.
 6. Place finishing platform on the ground and release Bolts M20.
- (Fig. A6.02)

Fig. A6.01

Fig. A6.02

Dismantling the guardrails

1. Position platform unit at an angle.
(Fig. A6.03)
2. Release crane lifting gear.
3. Dismantle handrail boards and/or guardrail tubes.
4. Dismantle guardrail posts.

Dismantling the brackets

1. Insert Fitting Pins in holes Ø 26 of the Spindle Connection on the Carriage and secure with cotter pins.
(Fig. A6.04)
2. Attach crane lifting gear.
3. Set up platform unit, place on supports, and hold platform unit in position with crane. (Fig. A6.04)
4. Remove scaffold tubes.
5. Dismantle Vertical Struts (3) and Diagonal Struts (4).
6. Horizontally position working platform. (Fig. A6.05)
7. Release crane lifting gear.
8. Remove planking.
9. Dismantle girders.

Anchorage in the last concreting phase

Remove the last row of anchors in accordance with the risk assessment of the contractor.

Dispose of non-recyclable material in accordance with the respective national regulations.

Fig. A6.03

Fig. A6.04

Fig. A6.05

B1.1 General Guidelines

- Assemble decking in accordance with the respective country-specific safety regulations.
- Avoid - or at least cover - the realisation of tripping hazards, unnecessary recesses and openings in the decking.
- Distance between decking and building ≤ 50 mm. Gaps in the decking are not permissible. Planks are to be fitted tightly together.
- During working operations, we recommend a maximum distance of 20 mm between neighbouring platforms. Cover larger gaps with suitable and securely fitted materials. Alternative: use safety netting (26).
- The dimensions given for the platforms are valid for vertical applications. For inclined applications or use on circular structures, adjust the decking accordingly.
- For circular structures, take additional measures in accordance with the given radius.
- Plan the corner platforms so that accessing one platform from another can be done safely.
- Access routes and climbing procedures must also ensure that safe escape routes are available at all times.

(Fig. B1.01)

B1.2 Markings

We recommend that each platform is distinctly marked as well as creating a document with the following data:

- Company name
- Construction site
- Name of the planner
- Marking in accordance with the plans
- Dimensions
- Weight of the unit with formwork
- Weight of the unit without formwork
- Maximum formwork height
- Permissible loads

Fig. B1.01

B1.3 Planning of the Anchor Positioning Plate

Pos.	Components	Item no.
15.5	Anchor Positioning Plate M30	029380
15.11	Anchor Positioning Plate M36	029390

In order to ensure sufficient stability, we recommend fixing the Leading Anchor with the Anchor Positioning Plate (15.5 and 15.11). During planning, make sure there is adequate space (dimension x_{min}) so that the Advancing Bolt can be mounted.

Climbing Anchor M30: $x_{min} = 30$ mm.
Climbing Anchor M36: $x_{min} = 40$ mm.

H = height measurement.

Position of the Anchor Positioning Plate.
(Fig. B1.02)

Fig. B1.02

B2.1 System Dimensions

Position of Spindle Connector SCS

The position of the Spindle Connector (5.1) h_{Sp} and the position of the steel waler of the formwork must be included in the static calculations. These dimensions are decisive for the bending load of the Strongback (5). (Fig. B2.01)

- The Spindle Connector must be positioned below the top steel waler.
- Design dimensions must be considered for the static calculations as these influence the load-bearing capacity.

Regular vertical application:

- h_B Concreting height
= max. 4.00 m
- h_0 Static bracket height
= 2.58 m / 2.40 m
- c_2 Anchor spacing to concrete joints
= 35 cm
- h_{nom} Anchoring depth of the climbing anchor
- a Position of bottom formwork waler
= 46 cm
- b Waler spacing
= 1.18 / 1.48 / 1.78 m (VARIO)
- k Distance of top waler to concreting joint
- h_F Top side of Height Adjusting Unit
= 661 mm
- h_{Sp} Position of Spindle Connector SCS
- h_{cp} Position of concreting platform
- x_F Formwork depth
- L_{TB} Length of Tension Belt
- S Spindle length

Fig. B2.01

B2.2 Requirements

Standard case

Single-sided vertical application

The permissible width of influence and related bearing reactions

- taken from the separate SCS dimensioning information,
- determine through a separate static calculation.

Special cases

- Starter heights
- Inclined starter
- Inclined climbing units
- Changes in inclination
- All other executions deviating from the standard case

The static proof for the actual width of influence and the related bearing reactions of the special cases are to be determined in separate static calculations.

B2.3 Influencing Factors

b_K	Width of influence of the bracket
h_B	Concreting height
h_0	Static bracket height
p_B	Maximum fresh concrete pressure
q_K	Reduced wind flow pressure

Actual width of influence

Determine the actual width of influence by means of the strongback arrangement whilst taking into account the formwork cantilevers.

Permissible width of influence

The permissible width of influence for the concreting height h_B and the max. fresh concrete pressure p_B is provided in the charts. Take into consideration that deviating permissible widths of influence result from different waler arrangements.

Determining the fresh concrete pressure

Determine the maximum fresh concrete pressure taking into account decisive influencing factors:

- Installation method
- Rate of rise
- Consistency of the fresh concrete
- Concrete density
- Setting behaviour
- Concrete and ambient temperature

Determining the wind loads according to DIN EN 1991-4 and DIN EN 12812

The dynamic wind pressure $q(z)$ is determined from the operating height z , wind load zone WZ and location, and reduced by a service life factor κ .

$$q_K = \kappa \cdot q(z)$$

z	Operating height above ground
κ	Service duration (up to 24 months $\kappa = 0.7$)
$q(z)$	Wind speed pressure depending on the operating height and the reference dynamic pressure according to the wind zone

B2.4 Load Combinations

- The given permissible loads and operating conditions are to be maintained for the complete phase of the respective load combination.
- For all load combinations, the safe transfer of the bearing forces into the structure must be proven.

Load Combinations 1 Working Conditions

Wind load:

$$q = 0.50 \text{ kN/m}^2 (V_W = 102 \text{ km/h})$$

- Formwork retracted or in the concreting position.
- Working permitted on all platforms.
- Material storage on the working platform allowed.

Load Combinations 2 When concreting

Wind load:

$$q = 0.25 \text{ kN/m}^2 (V_W = 72 \text{ km/h})$$

- Formwork in concreting position
- Working only allowed on the concreting platform.
- Materials can be left on the working platform.

Load Combinations 3 When out of service

Wind load as specified:

$$q_K \leq 1.3 \text{ kN/m}^2 (V_W \leq 164 \text{ km/h})$$

- Formwork in concreting position.
- Working not permitted.
- When secured against lifting, materials can be left on the working platform.

B2.5 Verification

Verification of the brackets

The brackets and Starter Brace Frames are verified by comparing the to-be-determined or actual width of influence from the formwork with the permissible width of influence. The load-bearing capacity of the anchorage is determined by means of interaction diagrams, and depends on the anchoring depth and concrete strength.

The platforms and side protection are not decisive in maintaining the permissible widths of influence.

Verification of the platforms

Verification of the decking and platform beams always takes place in accordance with DIN EN 12811-1. When complying with the standard dimensions and permissible widths of influence, no proof is required.

The length of the cantilevered area of the platform beams must not be larger than half the distance of the two brackets of one unit.

In those cases where cantilevers are longer, the main beams together with their fastenings are to be verified by the contractor and additionally secured against lifting.

Verification of the corner platforms

In the corner area, a transition zone around the corner of the structure is usually required. For this purpose, corner platforms are realised. On the working platform, a mitred projection up to an additional middle platform beam is allowed. No overhang is allowed for the formwork nor finishing platform. For larger overhangs, the width of influence of the corner bracket is to be increased accordingly or a separate statistical proof is to be carried out.

Verification of the guardrails

Verification of the side protection for the concreting and intermediate platforms is in accordance with country-specific standards. When complying with the standard dimensions and permissible widths of influence, no proof is required.

Verification of the bearing reactions

The design values of the bearing reactions for the permissible width of influence are to be taken from the separate SCS dimensioning information, and interpolated linearly for the fresh concrete pressure p_B and concreting height h_B . These values must be converted with the help of the given formulae for the actual width of influence. The reaction forces Z_o and Q_o on the climbing anchor are to be verified separately with the help of the interaction charts for each load case.

Bearing reactions of the Starter Brace Frame

$Z_{DW,d}$

Design tensile force of the inclined brace frame anchor

$D_{l,d} + D_{m,d}$

Vertical design bearing forces on front contact point of the Starter Brace Frame

$D_{r,d}$

Vertical design bearing force on rear contact point of the Starter Brace Frame (Fig. B2.02)

Bearing reactions of the brackets

$Z_{o,d}$

Design tensile force on the bracket anchoring.

$Q_{o,d}$

Vertical design shear force on the bracket anchoring

$D_{u,d}$

Design compression force to be supported on the base of the bracket.

$Z_{z,d}$

Design tensile force in the wind safety device.

(Fig. B2.03)

Fig. B2.02

Fig. B2.03

B2.6 Dimensioning of the Anchor

Climbing Anchor

- Germany: for the verification of the load transfer into the concrete, take into consideration the separate SCS dimensioning information.
- For determining the required anchoring depth h_{nom} and concrete strength with specified minimum edge distances, take into consideration the separate SCS dimensioning information.
- If the minimum requirements regarding edge distances, reinforcement or concrete strength are not met, additional investigations for these conditions are to be implemented.

The following are to be verified by the project's structural engineer:

- The safe transfer of the anchoring forces into the concrete.
- The safe transfer of all bearing forces into the structure.
- The required concrete strength at which point the platforms can be moved.
- Verification and planning of possible additional reinforcement.

Transfer of forces:

- The reaction force from shear force V is transferred via the pressure on the periphery of the Climbing Cone V_T and Cone V_K into the concrete.
- The horizontal tensile force H is transferred via the pressure on the Threaded Anchor Plate N_A into the concrete. Shear stresses occur in the concrete along a considered breakout cone.
- The permissible tensile and shear forces are limited through the load-bearing capacity of the tie rod, the concrete strength, the edge distances c_2 of the anchoring as well as the anchoring depth h_{nom} .

(Fig. B2.04)

Fig. B2.04

B3.1 Standard Case

Starter height ≥ 3.00 m
Static bracket height 2.58 m.
(Fig. B3.01)

Pos.	Components per climbing unit	Qty	Item no.

28	Anchor Bolt PERI 14/20 x 130	2	124777

Fig. B3.07

B4.1 Inclinations - General

Basically, the permissible width of influence of the brackets with inclined Starters can be smaller when compared to the vertical application.

Risk of tipping!
Install Anchor Bolt (28) at the rear of the Starter Bar (19).

- Separate static calculation required.
- Concreting platform can be inclined in 2 steps of 15°.
- We recommend installing Tension Belts (12) for pretensioning. As a result, additional deformations caused by the play in the bolt connections is avoided.

Pos.	Components per Starter	Qty	Item no.
5	Strongback SCS 325	2	118584

Pos.	Components - alternative	Qty	Item no.
8	Heavy Duty Spindle SCS 198-250	2	118585

Determine anchor position $\leq 45^\circ$.
(Fig. B4.01)

B4.3 Forward inclinations of 30°

Pos.	Components - alternative	Qty	Item no.
27	Heavy-Duty Spindle SLS 260-360	2	101779

Determine anchor position $\geq 45^\circ \leq 60^\circ$.
(Fig. B4.02)

- Re-determine the anchor spacing x_A for the anchorage of the Starter Brace Frame (20).
- When using standard formwork, the concreting height h_B must be reduced.

Fig. B4.02

B5.1 Inclinations - General

With inclined climbing units, the bracket's permissible width of influence can basically be smaller when compared to the vertical climbing application due to the higher load.

Risk of tipping!

Do not remove the fitting pins from the adjusting unit or carriage.

- Separate static calculation required.
- Separate working platform, inclined to the horizontal with Platform Suspension DW 15 (18).
- Concreting platform can be inclined in 15° steps.
- We recommend installing Tension Belts (12) for pretensioning in order to avoid additional deformations resulting from the play in the bolt connections.

Pos.	Components per climbing unit	Qty	Item no.
12	Tension Belt	2	051250
15	Leading Anchor	2	118585
13	Finishing platform > standard	1	–
18	Platform suspension	2	see below

Pos.	Components per platform suspension	Qty	Item no.
	Tie Rod Special Length DW 15	1	030030
	Eye Nut RCS DW 15	1	115378
	Bolt ISO 4014 M30 x 80	1	024900
	Bolt ISO 4014 M30 x 120	1	104477
	Nut ISO 7042 M20	1	781053

B5.2 Rear inclinations of up to 30°

Anchor position (15) is predetermined through the assumed failure cone with an incline of 1:1.5 and an edge distance of 350 mm.

- Special lifting equipment is required for moving the climbing unit.
- The finishing platform should be wider in order to allow better access from the working platform to the finishing platform.
- Install Tension Belt (12) for increased system stability.

(Fig. B5.01 + B5.01a)

Fig. B5.01

Fig. B5.01a

B5.3 Forward inclinations of up to 30°

- Special lifting equipment is required for moving the climbing unit, e.g. Lifting Beam.
- Install Tension Belt (12a) for increased system stability.
- Install Tension Belt (12b) between the Strongback (5) and Crossbeam and then tension so that the Heavy Duty Spindle (8) is free of play.

(Fig. B5.02 + Fig. B5.02a)

Pos.	Components per climbing unit	Qty	Item no.
17	Connection Plate SCS Ø 21–125	2	123664

Fig. B5.02a

Fig. B5.02

B6.1 Inclinations - General

With inclined climbing units, the bracket's permissible width of influence can basically be smaller when compared to the vertical climbing application due to the higher load.

- Separate static calculation required.
- Concreting platform can be inclined in 15° steps.

B6.2 Rear inclinations of up to 30°

Risk of tipping for SCS 190!
Do not remove the fitting pins from the adjusting unit.

Pos.	Components	Qty	Item no.
15	Leading Anchor	2	–

- Anchor position (15) is predetermined through the assumed failure cone with an incline of 1:1.5 and an edge distance of 350 mm.
- Special lifting equipment is required for moving the climbing unit.

(Fig. B6.01)

We recommend using the Crossbeam Unit SCS 250 with Carriage.

This means:

- safe access to the working platform is possible,
- the striking clearance is sufficient.

Fig. B6.01

B6.3 Changes in forward inclinations of up to 30°

Pos.	Components per climbing unit	Qty	Item no.
12	Tension Belt	2	051250
21	Bracing Shoe SCS M36/DW 20	2	123819
	Anchor M30: Bolt ISO 4017 M30 x 70	2	029420
	Anchor M36: Bolt ISO 4017 M36 x 70	(2)	029430
23	Bracing DW 20, consisting of:	2	–
	Tie Rod DW 20, Special Length	2	030030
	Hex. Nut DW 20 SW 36/60	2	030580
	Anchor Plate RCS DW 20	2	114082
	Wingnut DW 20	2	030990

- Special lifting equipment is required for moving the climbing unit, e.g. Lifting Beam.
- Install Tension Belt (12) for stabilising the system and additionally tension the Strongback (5) so that the Heavy Duty Spindle (8) is free of play.
- Anchor the vertical Tie Rod DW 20 (23) with Bracing Shoe SCS M36/DW 20 (21) for transferring the higher lift-off forces.

(Fig. B6.02)

We recommend using the Crossbeam Unit SCS 250 with Carriage in order to get enough pressure on the Heavy Duty Spindle.

Fig. B6.02

B7 Corner Platforms

Secure access to the next platform on building corners by means of cantilevered platforms must be guaranteed. Ideally, the working platform in the corner is realised on a mitre which means

- it is safe, even when the formwork is retracted and
- the platform cantilever is reduced.

Pos.	Additional components per corner platform	Qty	Item no.
13.1	Girders – Girder VT 20 – Lattice Girder GT 24 – Timber 80 x 160 m	2	according to length
13.3	End Guardrail Post CB	2	051610
13.6	Platform Beam Support RSC	2	116477

Risk of lift-off!

Secure girders or timber.

Wedge gaps between girders and crossbeams by means of timbers.

Assembly

1. Fix Platform Beam RCS (13.6) with Bolts M24 x 130 and Nuts M24 to the crossbeam.
→ Additional intermediate platform beams are to be supported.
SCS 190: Fig. B7.02 + B7.02a
SCS 250: Fig. B7.03 + B7.03a
2. In the mitre area of the free ends of the decking, screw on a timber piece (13.8) diagonally against the platform beam. (Fig. B7.01)
→ Decking is to be supported.
3. At the end of the platform, fix End Guardrail Posts (13.3) to the cantilevered platform beams or timbers. (Fig. B7.01)
4. Mount lateral guardrail protection, see A1.6.

TSS-Torx 6 x 60, galv.

SCS Single-Sided Climbing System

Item no.	Weight kg
116477	10,600

Girder Support RCS

Support for additional girders, 2 x GT 24 or VT 20, for use with Crossbeam RCS 220. With connection for Guardrail Post RCS.

Complete with

1 x 109612 Bolt ISO 4014 M24 x 130-8.8, galv.
1 x 105032 Nut ISO 7042 M24-8, galv.

110330	0,865
--------	-------

Girder Fixation M20

For mounting 80 mm wide wooden girders to platform beams, with suitable borings of Ø 21 mm.

Complete with

1 x 706458 Bolt ISO 4017 M20 x 40-8.8, galv.
1 x 781053 Nut ISO 7042 M20-8, galv.

Accessories

024470	0,008
--------	-------

TSS-Torx 6 x 60, galv.

118582	1,850
--------	-------

Mounting Ring SCS M30

For anchoring the SCS Bracket with high vertical loads.

Accessories

030920	1,650
--------	-------

Climbing Cone-2 M30/DW 20, galv.

SCS Single-Sided Climbing System

Item no.	Weight kg
030920	1,650

Climbing Cone-2 M30/DW 20, galv.
Anchoring System M30. For anchoring of climbing systems.

Note
Separate dimensioning information on request.

Nut ISO 7042 M20-8, galv.
Self-locking.

124630	5,330
--------	-------

Tie Yoke SCS Ø 60 - 200
For anchoring the Starter Bar SCS with Tie Rods DW 15.

Complete with
1 x 110755 Tie Yoke SRU
1 x 710222 Bolt ISO 4014 M16 x 80-8.8, galv.
1 x 070890 Nut ISO 7042 M16-8, galv.

Technical Data
Permissible load 2 x 90 kN.
Valid for Tie Yokes SRU with centre hole Ø 18 rectangular to outside holes Ø 18.

Item no.	Weight kg
030100	0,438

Wingnut DW 15, galv.

For anchoring with Tie Rod DW 15 and B 15.

Technical Data

Permissible load 90 kN.

030090	0,402
--------	-------

Hex. Nut DW 15 SW 30/108, galv.

For coupling Tie Rod DW 15 and B 15.

Technical Data

Permissible load 90 kN.

SCS Single-Sided Climbing System
